GENERAL NOTES:

1. THIS GRADING PLAN IS INTENDED TO INCORPORATE ALL REQUIRED EXCAVATIONS AND GRADING RELATING TO THE CONSTRUCTION OF THE ACCESS DRIVES, PARKING AREAS, SIDEWALKS, UNDERGROUND UTILITIES, BUILDING ENVELOPES AND LANDSCAPING AREA, WITHIN THE PROJECT BOUNDARIES.
2. SLOPES FOR ADA ACCESSIBLE WALKWAYS AND PARKING SPACES SHALL COMPLY WITH OSSC AND OTC REQUIREMENTS.
3. ALL CURBS SHALL BE 6" HIGH UNLESS OTHERWISE NOTED.
4. ALL FILL MATERIAL WITHIN LANDSCAPE AREAS TO CONFORM TO THE SOIL SPECIFICATIONS OUTLINED IN THE LANDSCAPE PLANS.
5. EXISTING FLOWLINE ELEVATIONS AT UTILITY CONNECTION POINTS ARE BASED ON ELEVATIONS SURVEYED AT MANHOLE LOCATIONS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO POTHOLE AND VERIFY THE EXACT LOCATION AND ELEVATION OF EXISTING UTILITIES PRIOR TO LAYING ANY PIPE ON THAT SYSTEM.
6. PRIOR TO PLACING THE CRUSHED ROCK BASE FOR DRIVEWAYS AND PARKING AREAS, THE PREPARED SUBGRADE SHALL BE TESTED AND APPROVED BY A FIRM LICENSED TO DO SO. ANY IDENTIFIED SOFT SPOTS SHALL BE OVER-EXCAVATED AND BACKFILLED WITH COMPACTED CRUSHED ROCK AS DIRECTED BY THE GEOTECHNICAL ENGINEER.
7. AS APPLICABLE, MATERIALS & WORKMANSHIP FOR PRIVATE UTILITY PIPING & FITTINGS (WATER, WASTEWATER AND STORM SEWER) SHALL CONFORM TO THE OREGON PLUMBING SPECIALTY CODE (OPSC), OR OREGON STRUCTURAL SPECIALTY CODE (OSSC). ALL PUBLIC IMPROVEMENTS SHALL COMPLY WITH CITY OF GLADSTONE DESIGN AND CONSTRUCTION STANDARDS.
8. EXISTING CONTOURS AND ELEVATIONS SHOWN HEREON ARE BASED ON ASSUMED ELEVATIONS. A TBM WAS ESTABLISHED ON THE EASTERLY SIDE OF SW 150TH ST...A SPIKE WITH AN ELEVATION = 231.81
9. AN EROSION CONTROL PERMIT SHALL BE REQUIRED FOR THIS PROJECT.

CONSTRUCTION NOTES

(401) CONSTRUCT VEGETATED BASIN AND INFILTRATION FACILITY PER DETAIL SHEET C-2.1.
(411) INSTALL 12" TRAPPED GIBSON STEEL CATCH BASIN OR APPROVED EQUAL - SEE DETAIL SHEET C-2.1
(412) INSTALL 24" TRAPPED GIBSON STEEL CATCH BASIN OR APPROVED EQUAL - SEE DETAIL SHEET C-2.1
(413) INSTALL SPECIAL SYSTEM OUTLET CONTROL STRUCTURE - SEE DETAILS SHEET C-2.1
(427) INSTALL CLEANOUT WITH TRAFFIC BEARING COVER PER DETAIL THIS SHEET
(428) INSTALL CLEANOUT WITH NON-TRAFFIC BEARING COVER PER DETAIL ON THIS SHEET
(435) INSTALL BEND AS NOTED
(439) INSTALL TEE-WYE
(442) CONNECT DOWNSPOUTS TO STORM DRAIN PIPE USING APPROVED FITTING
(448) CAP END
(480) INSTALL SCHED 40 PVC DWV STORM SEWER PIPE OR APPROVED EQUAL - SIZE AS NOTED.
(481) INSTALL ASTM 3034 SDR 35 PVC STORM SEWER PIPE OR APPROVED EQUAL - SIZE AS NOTED
(487) INSTALL ADS HDPE PERFORATED STORM SEWER PIPE OR APPROVED EQUAL - SIZE AS NOTED
(490) INSTALL ADS HDPE ACCESS/INSPECTION PORT 24 x 8 TEE WITH 8" RISER & CAP, SEE DETAIL SHEET C-2.1
(495) INSTALL APPROVED SPLASH PAD/ENERGY DISSIPATER - 6" DEPTH OF 4-1/2" - 2-1/2" RIVER ROCK. SEE DETAIL SHEET C-2.1

100 YEAR WS - OVERFLOW

AT A WS ELEVATION OF 232.90, THE ONSITE SWALES WILL HOLD 1726 CF BEFORE OVERFLOWING TO ADJACENT PROPERTIES TO THE WEST. HOWEVER, THE SITE WILL OVERFLOW ON THE EAST SIDE AT 232.43 VIA THE SOUTHERLY DRIVEWAY. ONLY NEED TO STORE 1504 CF TO ACCOMMODATE THE 100 YEAR STORM.

FILTRATION PLANTER NOTES:

- PLANTED PER LANDSCAPE PLANS.
- DRAIN ROCK TO BE WRAPPED WITH GEOTEXTILE FABRIC.
- TYPICAL OUTLET FROM CONVEYANCE PIPES SHALL BE A 24" SQUARE CONC PAD (ENERGY DISSIPATORS) OR APPROVED EQUAL.
- WATER QUALITY OVERFLOW STRUCTURE TO BE A 12" SQUARE BASIN WITH SLOPED TOP (GIBSON STEEL OR APPROVED EQUAL - AS SHOWN)

ALL DETENTION/INFILTRATION FACILITIES SHALL BE DESIGNED AND CONSTRUCTED TO MEET ALL APPLICABLE CRITERIA OF THE CWS R&O 19-5 (DEC. 2019) AND OTHER APPLICABLE CITY OF BEAVERTON STANDARDS.

3.0 PIPED UTILITIES:

1. Contractor shall coordinate connections to existing water, wastewater and storm sewer facilities. Any extraneous fees required to make the connections will be paid by the OWNER.
2. As applicable, materials & workmanship for private utility piping & fittings (water, wastewater and storm sewer) shall conform to the Oregon Plumbing Specialty Code (OPSC), or Oregon Structural Specialty Code (OSSC). All public improvements shall comply with City of Beaverton Design and Construction Standards.
3. All storm and wastewater piping shall have cleanouts installed within 5 feet of the building connection, at minimum 100 foot intervals and for every 135 degrees of bend as per the uniform plumbing code (OSSC 1101.4.4, 1101.11.3.1 & OSPC 707.0, 719.0).
4. Bedding and Backfill: Unless specified otherwise, all pipes in the street right of way shall be bedded with a minimum 2 inch depth of 3/4" minus crushed rock bedding and backfilled with compacted 3/4" minus crushed rock in the pipe zone (crushed rock shall extend a minimum of 12 inches over the top of the pipe in all cases). Crushed rock trench backfill shall be used under all improved areas, including sidewalks. Granular trench backfill shall be compacted to 92% of the maximum dry density per AASHTO T- 180 test method (Modified Proctor).
5. The Contractor shall have appropriate equipment on site to produce a firm, smooth, undisturbed subgrade at the trench bottom, true to grade. The bottom of the trench excavation shall be smooth and free of loose materials for the entire width of the trench prior to placing the granular bedding material.
6. Contractor shall provide all materials, equipment and facilities required for testing all utility piping.
7. Tracer Wire. All non-metallic water, wastewater and storm sewer piping located outside of the public right-of-way or not laid in straight lines between structures shall have an electrically conductive insulated 12 gauge copper tracer wire the full length of the installed pipe using blue wire for water and green for storm and wastewater piping. Tracer wire shall be extended up into all valve boxes, and manholes and catch basins. Tracer wire penetrations into manholes shall be within 18-inches of the rim elevation. The tracer wire shall be tied to the manhole frame to allow retrieval from the outside of the manhole.
8. Warning Tape. Detectable or non-detectable acid and alkali resistant safety warning tape shall be provided along the full length of all wastewater and storm drain service laterals and along all water, wastewater and storm drain mainline segments not located under sidewalks or paved portions of public streets, Underground warning tape shall be continuous the entire length of service laterals installed from the mainline to the back of the PUE.

4.0 WASTEWATER:

1. All pipe materials and construction shall comply with APWA, and OPSC standards. Unless otherwise shown, all gravity wastewater pipe shall be PVC in conformance with ASTM D-3034, SDR 35. Pipe within five feet of buildings shall be schedule 40 PVC, ABS. All other appurtenances and installation to conform to OPSC specifications. All pressure pipe shall be HDPE Pressure Pipe (ASTM D3035 DR11), Schedule 40 PVC, OR approved equal.
2. Cleaning. Prior to leakage testing, mandrel testing and/or TV inspection, flush & clean all wastewater mains & laterals, & remove all foreign material from the mainlines & manholes. Failure to clean all dirt, rock & debris from pipelines prior to TV inspection will require them to be re-cleaned and re-TV'd.
3. Leakage Testing. Wastewater pressure line and appurtenances shall be tested for leakage. Leakage tests shall include an air test of the 2" pressure main prior to paving. Air test shall be performed on the system using 100 psi. The pump vault shall be pressure tested per the manufacturers specifications.

5.0 STORM DRAIN:

1. All storm pipe materials and construction shall comply with CITY, APWA and OPSC standards. Unless otherwise noted on the plans, storm drain pipe shall be PVC in conformance with ASTM D-3034, SDR 35. Pipe within five feet of buildings shall be schedule 40 PVC, DWV. Contractor shall use uniform pipe material on each pipe run between structures unless otherwise directed or approved. Jointed HDPE pipe shall not be used for slopes exceeding ten percent (10%).
2. Catch basins and junction boxes shall be set square with buildings or with the edge of the parking lot or street wherein they lie. Storm drain inlet structures and paving shall be adjusted so water flows into the structure without ponding water. All catch basins shall be Gibson Steel Basins with bike proof, heavy duty traffic grate (supports H25 loads) or approved equal.
3. Unless otherwise approved by the Engineer, all storm drain connections shall be by manufactured tees or saddles.
4. Sweep storm drain pipe into catch basins and manholes as required. Cleanouts shall be provided per OSPC.
5. Unless otherwise specified or directed, install storm drain pipe in accordance with manufacturer's installation guidelines.
6. Cleaning. Upon completion of installation of the storm pipe system, and prior to mandrel testing, flush and clean all storm drains, and remove all foreign material from mainlines, manholes and catch basins.
7. Mandrel Testing. Contractor shall conduct deflection test of flexible storm sewer pipes (10" dia. and larger) by pulling an approved mandrel through the completed pipe line following trench compaction. The diameter of the mandrel shall be 95% of the initial pipe diameter. Test shall be conducted not more than 30 days after the trench backfilling and compaction has been completed.

CITY OF BEAVERTON
BUILDING DIVISION

NOTES:
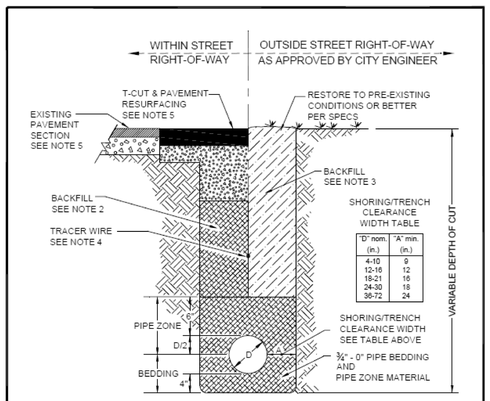
1. PLACE RP WITHIN PROPERTY LINE AS CLOSE TO METER AS POSSIBLE WITH NO CONNECTIONS OR TEES BETWEEN METER AND RP.
2. PROVIDE ADEQUATE PROTECTION AGAINST FREEZING
3. PROVIDE A SCREENED DRAIN CAPABLE OF PASSING A FULL RELIEF DISCHARGE (SEE DRAWING 690-10 FOR GUIDANCE ON DRAIN SIZING).
4. ALL PRE-MANUFACTURED ENCLOSURES SHALL COMPLY WITH ASSE1060, CLASS III.
5. CONCRETE PAD MUST BE SET AT OR ABOVE SURROUNDING FINISH GRADE AND/OR MAXIMUM FLOOD ELEVATION.
6. DEVICE IS TO BE SUPPORTED BY SUBSTANTIAL MATERIAL SUCH AS UNISTRUT TO RESIST RUST AND DECAY. SUPPORTS ARE TO BE INSTALLED TO PREVENT UNDUE STRESS OR STRAIN ON THE DEVICE AND ITS SERVICE PIPING.
7. AS A PRIVATE FACILITY, THE INSTALLATION IS GOVERNED BY THE OPSC AND OREGON HEALTH AUTHORITY, AS APPLICABLE.
8. CONSULT WITH BUILDING DEPARTMENT FOR PROPER SIZING OF RP.

Beaverton Engineering	¾" TO 2" REDUCED PRESSURE BACKFLOW ASSEMBLY (RP) ABOVE GROUND	SCALE: NONE	DATE: JUNE 2018	690-6

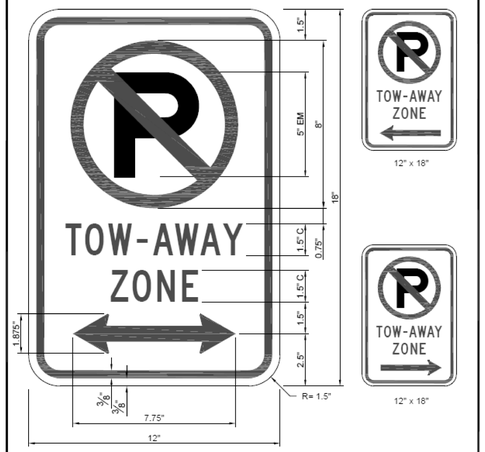
FILENAME: 690-6.dwg



NOTES:
1. These trench backfill requirements apply to all public utility pipes. For additional requirements, see *CWS Design and Construction Standards* and City's *Engineering Design Manual* section 211.
2. For trenches 12" wide or less in streets with classifications higher than Residential, use controlled density fill (CDF) as per sec 210.19. For all other trenches, use 3/4" - 0" aggregate compacted to 95% of max density per *AASHTO* t-99 and *ODOT/APWA spec* 00405.
3. Use class 'A' backfill compacted to 90% of max density per *AASHTO* t-99 and *ODOT/APWA spec* 00405.
4. Tracer wire shall be placed above non-metallic pipe and 2 feet below finished grade when required by Oregon State Plumbing code. Reference City's EDM section 211.1.4.o. Storm and sanitary sewer services shall be marked with magnetic tape per CWS D&C section 5.09.4.c
5. Restore to original conditions or better. See specifications and drawing 302.
6. For conduit trench requirements see drawing 301.
7. The City reserves the right to require compaction testing of the bedding material when it exceeds the 4-inch base section beneath the pipe.

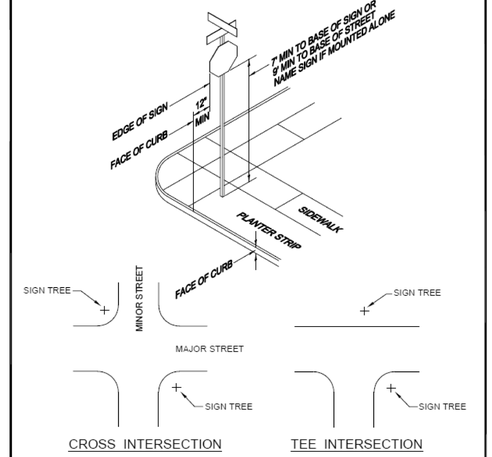
Beaverton Engineering	PIPE TRENCH BACKFILL	SCALE: NONE	DATE: JUNE 2018	300

FILENAME: 300.dwg



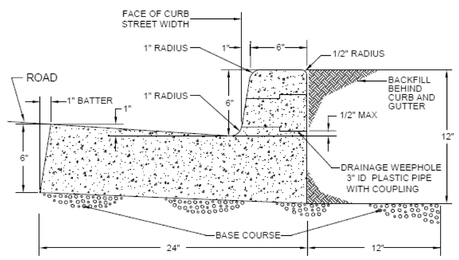
NOTES:
1. Flat blanks shall be 0.080" gauge with 6063 T6 alodine coated aluminum substrate.
2. Background shall be white 3M Scotchlite brand High Intensity Reflective sheeting.
3. Symbol shall be black, 5" EM series
4. Legend text shall be 1.5" C series.
5. Border, legend, circle & diagonal shall be red.
6. For sign mounting, see drawing 400.

Beaverton Engineering	NO PARKING SIGNS	SCALE: NONE	DATE: JUNE 2018	407



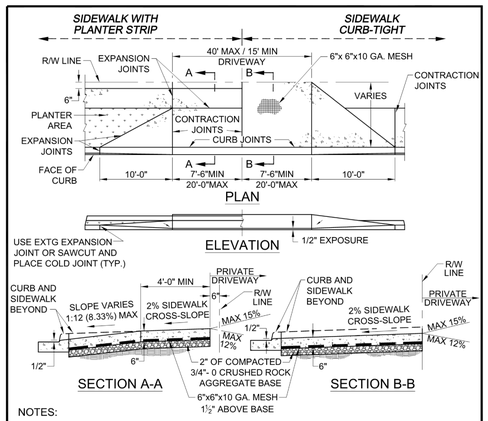
NOTES:
1. Sign locations shall be according to the *MUTCD* and as modified herein.
2. Signs where the sidewalk is curb tight shall be located 6 inches outside the sidewalk to a maximum distance of 7 feet from the face of curb.

Beaverton Engineering	TYPICAL SIGN LOCATIONS	SCALE: NONE	DATE: JUNE 2018	405



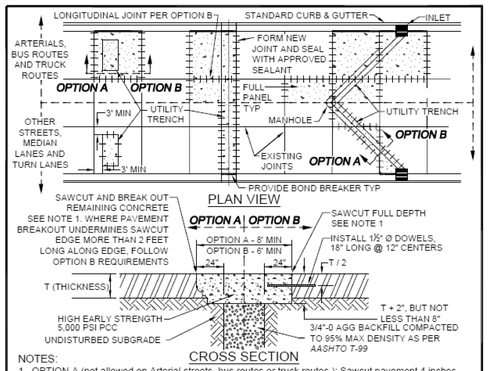
NOTES:
1. For use along medians, gutters may be reduced when preapproved by City Engineer.
2. Concrete to have compressive strength of 4,000 psi at 28 days.
3. Expansion joints to be provided at each:
   a. Point of tangency.
   b. Cold joint.
   c. Side of inlet structures.
   d. Side of driveways.
4. Expansion joint material to be pre-molded, asphalt impregnated, non-extruding, with a thickness of 1/2 inch.
5. Contraction Joints shall have:
   a. Spacing of not more than 15 feet.
   b. Depth of joint of at least 1½ inches.
6. Base rock 1½"-0 or 3/4"-0, 95% (*AASHTO* T-180) compaction. Base rock shall be to subgrade of street structure or 7.5 inches, whichever is greater, and shall extend 12 inches behind the curb.
7. Drainage weephole shall be:
   a. 3-inch diameter I.D. plastic pipe with coupling and beveled outlet end to match face of curb.
   b. Centered with contraction joints.
   c. Core-drilled through existing curbs for drainage access.
8. Proof roll subgrade and base rock section prior to placement of curb.

Beaverton Engineering	STANDARD MONOLITHIC CURB AND GUTTER	SCALE: NONE	DATE: JUNE 2018	205



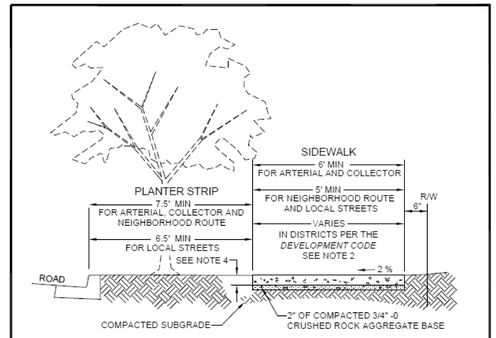
NOTES:
1. Section A-A may be used for curb-tight sidewalk driveway aprons if sidewalk's width is 10' or more.
2. Concrete shall have a minimum breaking strength of 4,000 psi after 28 days.
3. Curb joint shall be a troweled joint with a minimum 1/2 inch radius along back of curb.
4. Expansion joints shall be 1/2 inch pre-molded asphalt impregnated material, cedar or approved equal extending from top of base to finished grade.
5. For driveways 24 feet wide or greater, concrete to be increased to a 7 inch depth.
6. Finish with broom and edge all joints.
7. Weepholes not to be placed in wing.
8. If curbing is being removed to install a driveway and the gutter should become separated from the driving surface in excess of 1/16 inch, then the gutter shall also be removed and replaced.
9. Wings of the commercial driveway which are a portion of the sidewalk shall not exceed 8.333% (1:12).
10. ODOT Standard Drawings for driveways may be used when preapproved by City Engineer.
11. Slope of the driveway may be away from the curb when preapproved by City Engineer.

Beaverton Engineering	STANDARD COMMERCIAL DRIVEWAY	SCALE: NONE	DATE: JUNE 2018	210



NOTES:
1. OPTION A (not allowed on Arterial streets, bus routes or truck routes.): Sawcut pavement 4 inches deep or 1/2 the panel thickness (T), whichever is greater, before removal. Break out with mechanical hammer and carefully remove remaining concrete next to joint so as not to disturb the pavement surface to remain. One side of utility cut is to be along existing joint. OPTION B: Sawcut pavement full depth and install 1½ inch Ø dowels as shown. After drilling holes, place non-shrink grout in back of holes before inserting dowels. (Note: At interfaces of two adjacent new panels, an approved keyway may be substituted for dowels. For sawcuts through existing panel joints, sawcut existing panel joint(s) full depth before removing existing pavement.)
2. Partial panel replacement may be approved by the City Engineer per the *Engineering Design Manual*.
3. If utility trench width is greater than 1/2 of the panel width, then remove pavement to the next joint.
4. If utility trench wall must be closer than 3 feet from the joint, then remove pavement to the joint.
5. When panels are offset or irregular in any manner, the City Engineer shall determine the area of pavement replacement.
6. After placement of pavement, re-sawcut the joints that intersect the trench. The depth of sawcut is to be T/3. Seal the new joints per the *Engineering Design Manual*.
7. If pavement is undermined during repair, sawcut and remove pavement back to undisturbed subgrade.
8. If pavement is damaged during repair, sawcut and remove back to undamaged pavement.

Beaverton Engineering	STREET CUT IN PCC PAVEMENT PERPENDICULAR OR SKEWED TO CENTERLINE	SCALE: NONE	DATE: JUNE 2018	305



NOTES:
1. Concrete shall have a minimum compressive strength of 4,000 psi at 28 days. For slump see specifications.
2. Sidewalk panels shall be square with their length equal to the sidewalk's width, except that sidewalks in the Regional Center, Town Center, Station Area and Station Community districts may be wider than 6 feet, in which cases their panels may be 4 to 6 feet square, but all of equal size.
3. Expansion joints to be placed at sides of driveway approaches, utility vaults, sidewalk ramps and/or at points of tangency in curb as shown on the standard drawings for sidewalk ramps and at spacing not to exceed 45 feet.
4. Sidewalk shall have a minimum thickness of 4 inches, except that sidewalk that is intended as a portion of a driveway shall have a minimum thickness of 6 inches. See *Beaverton Standard Dwgs* 210 & 211.
5. Finish with broom and edge all joints.
6. Width of curb is included in planter strip width.
7. Street trees are required except where specifically modified or waived in writing by the City Engineer.
8. For sidewalk repairs, replacements and installations in existing developments, match existing width of sidewalks, and sidewalk panels' widths and lengths.

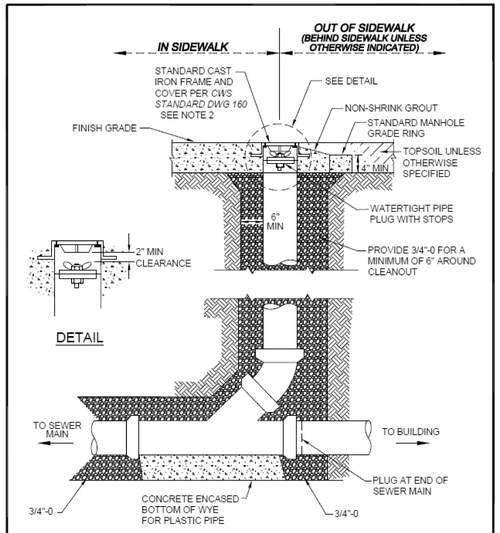
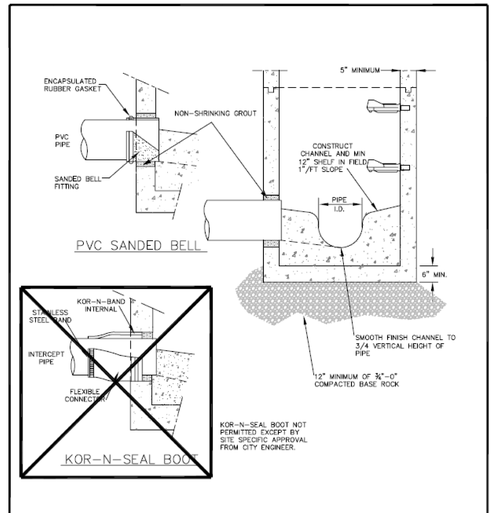
Beaverton Engineering	CWS STANDARD MANHOLE WITH C.O.B. MODIFICATIONS	SCALE: NONE	DATE: JUNE 2018	330



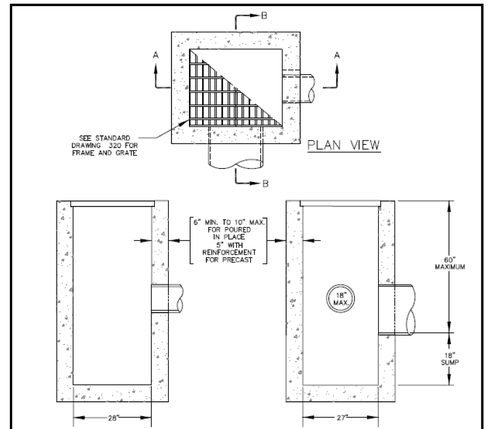
NOTES:
1. Concrete encase entire wye section and 45° bend if concrete pipe.
2. Cleanout in sidewalk to be centered in sidewalk width.

Beaverton Engineering	STANDARD CLEANOUT IN EXISTING STREET	SCALE: NONE	DATE: JUNE 2018	340



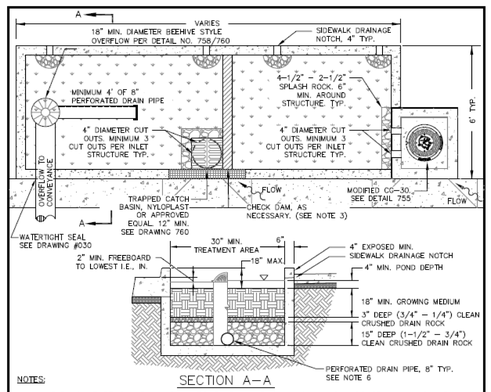
NOTES:
1. ALL PRE-CAST MANHOLE SECTIONS SHALL CONFORM TO THE REQUIREMENTS OF ASTM C-478 AND DRAWING 330.
2. NON-FLEXIBLE PIPES SHALL HAVE A SHEAR JOINT WITHIN 18"-24" OF THE INSIDE WALL OF THE MANHOLE.

Beaverton Engineering	MANHOLE CONNECTIONS	SCALE: NONE	DATE: JUNE 2018	331



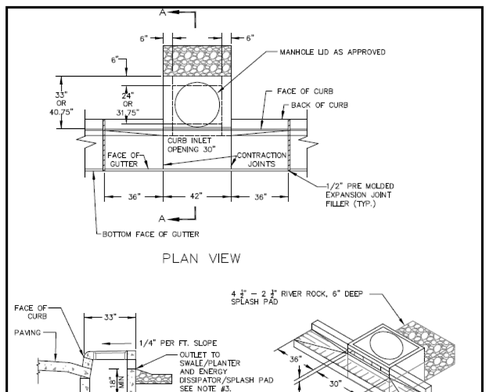
NOTES:
1. ALL PRECAST SECTIONS SHALL CONFORM TO REQUIREMENTS OF ASTM C-478.
2. INSTALL STRUCTURE ON MIN. OF 8" OF 3/4"-0" COMPACTED BASE MATERIAL.
3. PRE CAST REINFORCEMENT SHALL BE REBAR MEETING ASTM A615 GRADE OR WELDED WIRE MEETING ASTM A497.
4. ALL POURED INPLACE CONCRETE SHALL HAVE A 28 DAY STRENGTH OF 3000 P.S.I. AND A SLUMP OF 2" TO 4".
5. AREA DRAINS IN REAR OR SIDE YARDS SHALL NOT BE SUMPED AND SHALL BE PROPERLY CHANNELIZED.
6. PRECAST STRUCTURES CONFORMING TO ODOT TYPE CG-2 CATCH BASIN INLETS ARE AN ACCEPTABLE ALTERNATE. (ALL GRATE MATERIALS AND DIMENSIONS SHALL MEET CWS STANDARDS AS SHOWN ON DRAWING 320).

AREA DRAIN TYPE II		
DRAWING NO. 380	REVISED 10-31-19	Clean Water Services



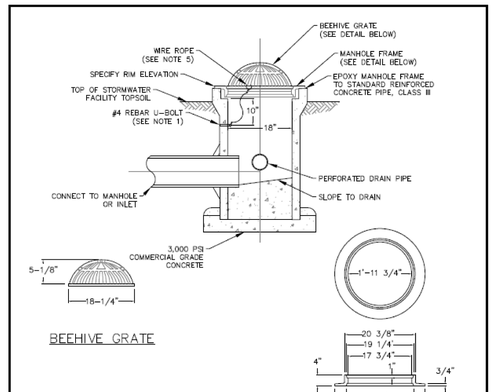
NOTES:
1. THIS DETAIL REPRESENTS A FLOW THROUGH PLANTER WITH FULL LENGTH CONCRETE WALLS AND FLOOR. FOR INFILTRATION PLANTER CONCRETE WALLS W/FOOTING WILL BE REQUIRED AS SHOWN ON DRAWING #750.
2. WALL'S STRUCTURAL DESIGN AND DIMENSIONS DETERMINED BY ENGINEER.
3. PROVIDE PROTECTION FROM ALL VEHICLE TRAFFIC, EQUIPMENT STAGING, AND FOOT TRAFFIC IN PROPOSED FACILITY AREAS PRIOR TO, DURING, AND AFTER CONSTRUCTION.
4. SIDEWALK ELEVATION MUST BE SET ABOVE CHECK DAM AND INLET/OUTLET ELEVATIONS TO ALLOW OVERFLOW TO DRAIN TO STREET OR PIPED OVERFLOW SYSTEM AS APPLICABLE.
5. PLANTER SHALL BE FLAT BOTTOM IN ALL DIRECTIONS TO WITHIN 1 INCH. CHECK DAMS SHALL BE PLACED ACCORDING TO INDIVIDUAL PROJECT PLANS PER DETAIL 762. PROVIDE 2" MIN FREEBOARD.
6. STREET SIDE CURB NOTCHES TO BE LOCATED AS IDENTIFIED ON PROJECT PLANS.
7. SIDEWALK CURB NOTCH: 1" LOWER THAN SIDEWALK, SLOPED TO FACILITY. SIDEWALK DRAINAGE NOTCHES SHALL ALIGN WITH SIDEWALK CONTRACTION JOINTS AND LOW POINTS.
8. PERFORATED PIPE IN INFILTRATION FACILITIES: BOTTOM OF PIPE SHALL BE SET AT 2 1/2" ABOVE SUBGRADE. PERFORATED PIPE IN FLOW THROUGH FACILITIES: BOTTOM OF PIPE SHALL BE SET AT BASE OF DRAIN ROCK LAYER.
9. HYDRANTS, UTILITY POLES, OR ANY UTILITY BOXES PLACED WITHIN PLANTER MUST BE APPROVED BY JURISDICTION IN WRITING.
10. ACTUAL ELEVATIONS AND DIMENSIONS TO BE CONSTRUCTED AS IDENTIFIED ON PROJECT PLANS.
11. ENSURE THAT A DOWNSTREAM CATCH BASIN IS IN PLACE FOR EMERGENCY OVERFLOW.

STREET SIDE PLANTER WITHOUT STREET PARKING		
DRAWING NO. 745	REVISED 10-31-19	Clean Water Services



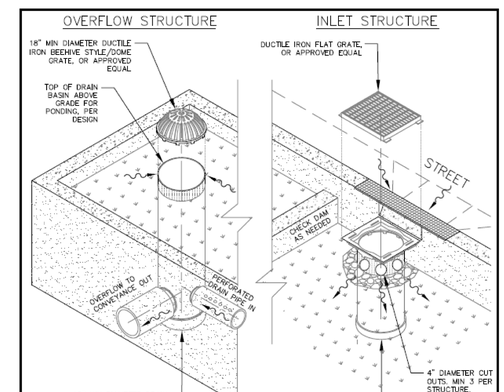
NOTES:
1. INSTALL STRUCTURE ON MINIMUM OF 8" OF 3/4" TO 0" COMPACTED BASE MATERIAL.
2. INSTALL ENERGY DISSIPATER/SPLASH PAD AT OUTFALL OF STRUCTURE.
3. FOUR INCH DIAMETER CUT OUTS, MINIMUM 3 CUT OUTS EVENLY SPACED PER INLET STRUCTURE, TYPICAL.

MODIFIED CG-30 INLET WITH SUMP		
DRAWING NO. 755	REVISED 10-31-19	Clean Water Services



NOTES
1. SECURE GRATE IN PLACE WITH 54" OF WIRE ROPE. LOOP ENDS OF WIRE ROPE AROUND U-BOLT AND GRATE. CRIMP EACH END OF WIRE ROPE WITH 3" OVERLAP.
2. DRILL 2" DEEP HOLES INTO PIPE AND EPOXY #4 REBAR U-BOLT (2"X 4") IN HOLES.
3. GRATE TO BE CAST IRON, ASTM A48 CL30.
4. SIZE INLET BASED ON CALCULATED FLOWS AND MANUFACTURERS RECOMMENDATIONS.
5. WIRE ROPE BETWEEN 1/8"-3/16" DIAMETER, STAINLESS STEEL, 7 STRANDS OF 19 WIRES.

BEEHIVE INLET		
DRAWING NO. 758	REVISED 10-31-19	Clean Water Services



NOTE:
1. PLACE STRUCTURE ON 3/4" TO 0" BASE ROCK PLACED OVER NATIVE SUBGRADE.

N.T.S.

3.0 PIPED UTILITIES:

1. Contractor shall coordinate connections to existing water, wastewater and storm sewer facilities. Any extraneous fees required to make the connections will be paid by the OWNER.
2. As applicable, materials & workmanship for private utility piping & fittings (water, wastewater and storm sewer) shall conform to the Oregon Plumbing Specialty Code (OPSC), or Oregon Structural Specialty Code (OSSC). All public improvements shall comply with City of Beaverton Design and Construction Standards.
3. All storm and wastewater piping shall have cleanouts installed within 5 feet of the building connection, at minimum 100 foot intervals and for every 135 degrees of bend as per the uniform plumbing code (OSSC 1101.4.4, 1101.11.3.1 & OSPC 707.0, 719.0).
4. Bedding and Backfill: Unless specified otherwise, all pipes in the street right of way shall be bedded with a minimum 2 inch depth of 3/4" minus crushed rock bedding and backfilled with compacted 3/4" minus crushed rock in the pipe zone (crushed rock shall extend a minimum of 12 inches over the top of the pipe in all cases). Crushed rock trench backfill shall be used under all improved areas, including sidewalks. Granular trench backfill shall be compacted to 92% of the maximum dry density per AASHTO T- 180 test method (Modified Proctor).
5. The Contractor shall have appropriate equipment on site to produce a firm, smooth, undisturbed subgrade at the trench bottom, true to grade. The bottom of the trench excavation shall be smooth and free of loose materials for the entire width of the trench prior to placing the granular bedding material.
6. Contractor shall provide all materials, equipment and facilities required for testing all utility piping.
7. Tracer Wire. All non-metallic water, wastewater and storm sewer piping located outside of the public right-of-way or not laid in straight lines between structures shall have an electrically conductive insulated 12 gauge copper tracer wire the full length of the installed pipe using blue wire for water and green for storm and wastewater piping. Tracer wire shall be extended up into all valve boxes, and manholes and catch basins. Tracer wire penetrations into manholes shall be within 18-inches of the rim elevation. The tracer wire shall be tied to the manhole frame to allow retrieval from the outside of the manhole.
8. Warning Tape. Detectable or non-detectable acid and alkali resistant safety warning tape shall be provided along the full length of all wastewater and storm drain service laterals and along all water, wastewater and storm drain mainline segments not located under sidewalks or paved portions of public streets. Underground warning tape shall be continuous the entire length of service laterals installed from the mainline to the back of the PUE.

4.0 WASTEWATER:

1. All pipe materials and construction shall comply with APWA, and OPSC standards. Unless otherwise shown, all gravity wastewater pipe shall be PVC in conformance with ASTM D-3034, SDR 35. Pipe within five feet of buildings shall be schedule 40 PVC, ABS. All other appurtenances and installation to conform to OPSC specifications. All pressure pipe shall be HDPE Pressure Pipe (ASTM D3035 DRII), Schedule 40 PVC, OR approved equal.
2. Cleaning. Prior to leakage testing, mandrel testing and/or TV inspection, flush & clean all wastewater mains & laterals, & remove all foreign material from the mainlines & manholes. Failure to clean all dirt, rock & debris from pipelines prior to TV inspection will require them to be re-cleaned and re-TV'd.
3. Leakage Testing. Wastewater pressure line and appurtenances shall be tested for leakage. Leakage tests shall include an air test of the 2" pressure main prior to paving. Air test shall be performed on the system using 100 psi. The pump vault shall be pressure tested per the manufacturers specifications.

5.0 STORM DRAIN:

1. All storm pipe materials and construction shall comply with CITY, APWA and OPSC standards. Unless otherwise noted on the plans, storm drain pipe shall be PVC in conformance with ASTM D-3034, SDR 35. Pipe within five feet of buildings shall be schedule 40 PVC, DWV. Contractor shall use uniform pipe material on each pipe run between structures unless otherwise directed or approved. Jointed HDPE pipe shall not be used for slopes exceeding ten percent (10%).
2. Catch basins and junction boxes shall be set square with buildings or with the edge of the parking lot or street wherein they lie. Storm drain inlet structures and paving shall be adjusted so water flows into the structure without ponding water. All catch basins shall be Gibson Steel Basins with bike proof, heavy duty traffic grate (supports H25 loads) or approved equal.
3. Unless otherwise approved by the Engineer, all storm drain connections shall be by manufactured tees or saddles.
4. Sweep storm drain pipe into catch basins and manholes as required. Cleanouts shall be provided per OSPC.
5. Unless otherwise specified or directed, install storm drain pipe in accordance with manufacturer's installation guidelines.
6. Cleaning. Upon completion of installation of the storm pipe system, and prior to mandrel testing, flush and clean all storm drains, and remove all foreign material from mainlines, manholes and catch basins.
7. Mandrel Testing. Contractor shall conduct deflection test of flexible storm sewer pipes (10" dia. and larger) by pulling an approved mandrel through the completed pipe line following trench compaction. The diameter of the mandrel shall be 95% of the initial pipe diameter. Test shall be conducted not more than 30 days after the trench backfilling and compaction has been completed.

STORMWATER PLANTERS

GENERAL NOTES

1. GROWING MEDIUM TO BE (SAND/LOAM/COMPOST) 3 WAY MIX (18" MIN DEPTH) FORMULATED TO COMPLY WITH CITY STORMWATER SOIL STANDARDS. THE APPROVED SELECTED PRODUCT TO BE USED IS THE 'WATER QUALITY MIX' FROM **LANE FOREST OR APPROVED**. PLEASE PROVIDE ONE QUART SAMPLES TO LANDSCAPE ARCHITECT PRIOR TO INSTALLATION.
2. THE BASE OF THE STORMWATER PLANTER SHALL INCLUDE A CONSTRUCTED MEDIUM COMPRISING A MIXTURE OF SAND, NATIVE SOIL, LOAM, AND COMPOST, THE FOC IN THE CONSTRUCTED MEDIUM MUST BE A MINIMUM OF 0.20 (I.E., 40-50%) ORGANIC MATTER. SEE ENGINEERS DRAWINGS FOR DETAILS
3. THE STORMWATER PLANTERS SHALL BE FULLY VEGETATED WITH ALL VEGETATION SPECIES ESTABLISHED PRIOR TO ISSUANCE OF FINAL OCCUPANCY AND COMMENCEMENT OF OPERATIONS. ALTERNATIVELY, IF THIS CONDITION CANNOT BE MET, THE APPLICANT SHALL PROVIDE AND MAINTAIN ADDITIONAL INTERIM EROSION CONTROL/WATER QUALITY MEASURES ACCEPTABLE TO THE DEVELOPMENT & PUBLIC WORKS DEPARTMENT THAT WILL SUFFICE UNTIL TIME AS THE STORMWATER PLANTER VEGETATION BECOMES FULLY ESTABLISHED.
4. PROVIDE ONLY HEALTHY, FULL PLANT MATERIAL AT SIZES INDICATED.
5. PLANT SUBSTITUTIONS TO BE APPROVED BY LANDSCAPE ARCHITECT.
6. PLANT LAYOUT TO BE APPROVED BY LANDSCAPE ARCHITECT PRIOR TO INSTALLATION.

LANDSCAPE GUIDELINES

SOIL PREPERATION

PLANT BEDS
1. FINISHED ELEVATION OF SUB-BASE TO BE 18" MINIMUM BELOW FINISHED GRADE.
2. TILL SUBGRADE THOROUGHLY TO A DEPTH OF 8" MINIMUM PRIOR TO PLACEMENT OF TOPSOIL.
3. PLACE 18" MINIMUM OF TOPSOIL OVER TILLED SUBGRADE. ADD 4" OF ORGANIC MATERIAL AND 15-5-10-10 FERTILIZER TO TOPSOIL AT THE RATE OF 20 LBS. PER 1000 SF. ROTO-TILL AMENDMENTS AND TOPSOIL TO A DEPTH OF 8" MINIMUM.
4. PROVIDE 3" OF SHREDDED FIR BARK MULCH OVER ALL PLANT BEDS.

PLANT MATERIAL

1. PROVIDE ONLY HEALTHY, FULL PLANT MATERIAL AT SIZES INDICATED.
2. PLANT SUBSTITUTIONS TO BE APPROVED BY LANDSCAPE ARCHITECT.
3. PLANT LAYOUT TO BE APPROVED BY LANDSCAPE ARCHITECT PRIOR TO INSTALLATION.

TREE PROTECTION

1. PROTECT ROOT ZONE OF EXISTING TREES TO REMAIN.
2. CUT NO ROOT LARGER THAN 2" WITHOUT APPROVAL BY LANDSCAPE ARCHITECT.
3. PROVIDE PROTECTIVE FENCING AT EDGE OF CRITICAL ROOT ZONE OF EXISTING TREES TO REMAIN.

IRRIGATION DESCRIPTION

1. IRRIGATION DISTRIBUTION TO BE DRIP LINE.
2. SYSTEM WILL PROVIDE FULL COVERAGE.
3. SYSTEM WILL PROVIDE SEPARATE ZONES FOR DIFFERENT SOLAR ORIENTATIONS.
4. MAIN LINE WILL HAVE MANUAL DRAIN VALVES.
5. SYSTEM WILL BE OPERATED AUTOMATICALLY.

CODE REQUIRMENTS

- THE EXISTING ARBORVITAE HEDGE TO THE WEST AND NORTH OF THE SITE WILL REMAIN AND ADDITIONAL ARBORVITAE WILL BE PLANTED TO MEET THE BUFFER REQUIREMENTS OF ONE TREE PER 30 LINEAR FEET, AND AN EVERGREEN SHRUBS THAT WILL FORM A 4 TO 6 FOOT HEDGE. THE EXISTING ARBORVITAE HEDGES WILL BE EVALUATED AND ANY THAT ARE IN POOR CONDITION OR DO NOT MEET THE BUFFER REQUIREMENTS WILL BE REMOVED AND REPLACED.

  NORTH PROPERTY EDGE -REQUIRED NO OF TREES - 5 TREES
  WEST PROPERTY EDGE -REQUIRED NO OF TREES - 7 TREES

- IN ADDITION TO THIS, THERE IS A 6-FOOT HIGH FULLY SIGHT-OBSCURING FENCE. SEE SITE PLAN FOR LOCATION.

LEGEND

- (BM / SC) INSTALL Copper B–LIne CUP 4111 Unmetered Street Light Controller on a MB1515 Pad with GFCI Outlet
- (JB / 1A) Install Type 1, 17"x10"x12", precast polymer concrete junction box with concrete skirt. Conform to ODOT Standard Drawing TM472
- (JB / EX) Existing concrete junction box
- (S) Install (S=Size) inch schedule 40 PVC or rigid metallic electrical conduit.All conduit to be installed per City standards.
- (N / G) Install (N=number) No. (G=AWG wire size) type XHHW wires
- 1 | 6 Install (N=number) No.(G=AWG wire size) type THWN wires.
- (LP / 03) Furnish and install LEDway Series LED Street Light Luminaire with a Type II Distribution, 100W–4000K, and 240V. STR–LWY–2M–HT–03–E–UL–SV–525. Fixture to include Photocontrol Receptacle. Furnish and install aluminum pole with 25 foot mounting height.Poles to be placed on 5CL–LB anchor base type foundation. Fixture and pole to be finished in Silver.

GENERAL NOTES

1. Locations of poles, conduits, and junction boxes shown on plan are approximate. Actual locations shall be designated in the field by the City engineer.
2. Coordinate locations of existing utilities prior to rough–in.
3. If junction box not installed in sidewalk, a PCC apron shall be installed per ODOT Standard Drawing TM472 and TM 472(A)
4. All equipment and installation shall conform to City of Beaverton standards.

CODE ANALYSIS

Use and Occupancy Classification — Chapter 3

Group A-3, Assembly, and Group B, Business

Exterior: Wall Construction Tilt-Up Concrete, Ground Floor Construction Concrete Slab on Grade, Second Floor Construction Wood Framed Engineered Joists and Beams, Roof Construction Wood Framed Engineered Joists and Beams.

Type III-B Construction, sprinkled

Building Heights and Area — Chapter 5

Mixed Use Occupancies: *Section 508*
Building is Mixed Use, Non-Separated Occupancy

Mixed Use, Non-separated Occupancies: *Section 508.3*
Use most restrictive allowable area, building height and Chapter 9 provisions.
No separation is required.
Occupancies are: A-3 Assembly and B Business
Most Restrictive Occupancy is: A-3 Assembly

Allowable Building Height: *per Table 504.3*
Allowable 75 feet (sprinkled)

Actual Building Height: 29'-0" from grade plane (average grade around building) to maximum height of highest roof

Stories Allowed: *Tables 504.3 & 504.4*
Allowed: 3 story
Actual: 2 story

Allowable Building Area: *Table 506.2 and Section 506*

Base Allowable Area: A_t = 28,500 sq. ft.

Frontage Increase (506.3.3): I_f = [F/P-0.25] x W/30
I_f = [385.5/385.5-0.25] x 28.1/30 = 0.70

Total Allowable Building Area (506.2.3): A_a = [A_t + (NS x I_f)] x S_s
A_a = [28,500 + (9,500 x .70)] x 2
A_a = 70,300 sq. ft

Actual area: 9,662 sq. ft.

Type of Construction — Chapter 6

Construction Classification: *Section 602*
Type III-B Construction, *602.3*
2-Hour Exterior Bearing Walls, no other resistances required for building elements by Table 601.

Fire Separation Distance: *Table 602*
Exterior walls with a Fire Separation Distance 20 feet or less are required to be 1-hour rated.

Fire-Rated Construction — Chapter 7

Exterior Wall Openings Based on Fire Separation Distance: *Table 705.8 & Section 705.8.1*

Fire Separation Distances:	Allowable Openings:
10-15 feet:	45% UP, S
15-20 feet:	75% UP, S
20-25 feet:	No Limit UP, S
25-30 feet:	No Limit UP, S
30+ feet:	No Limit

All Walls are 20 feet or more from property lines, unlimited openings allowed

Separated Occupancies *Section 707.3.9*
Building is Non-Separated Occupancy, all A Occupancy

Fire Barriers: *Section 707*
No Fire Barriers Required

Fire Partitions: *Section 708*
No Fire Partitions Required

Smoke Barriers: *Section 709*
No Smoke Barriers Required

Smoke Partitions: *Section 710*
No Smoke Partitions Required

Floor and Roof Assemblies: *Section 711*
No Floor and Roof Assemblies Required

Vertical Openings: *Section 712*
No Vertical Openings Required

Penetrations, Fire-Resistant Joint Systems & Opening Protectives: *Sections 713-716*
Not Applicable

Concealed Spaces: *Section 718*
Not Applicable

Fire Sprinkler System — Chapter 9
Required due to Section 903.2.1.3, sub 3

Means of Egress — Chapter 10

Occupant Load: Table *1004.5*

Assembly Areas:	15 net	
Business Areas:	150 gross	(Occupant Load to be determined at tenant infill configurations)

Per Space Required Number of Exits: Table *1006.2.1 and 1006.3.2*
One Exit Max Occupant Load, Group A : 49
2 exits are required if common path of egress exceeds allowable above.
Required Exit Separation (per Space & per Story): *Section 1007.1.1*
Required: 1/3 max overall diagonal if sprinkled (exception 2)

Exit Access Travel Distance: *Section 1017 & Table 1017.2*
Allowed (Group A, S): 250 feet
Actual: 120 feet (maximum)

Number of Exits & Exit Configuration — Section 1021

Per Story Required Number of Exits: *Section 1021.2*
Min. Number of Exits per story: 2 per story, (except as modified in 1021.2 below)

Required Interior or Exterior Exit Stairway: *Section 1021.1*
Interior or Exterior Exits Stairways Req: None required if 2 stories or less

Stairs — Section 1009, 1021, 1022

Minimum Stair Width: *Section 1005.1 and 1011*
Width, base: 44" min. (36" min. with occ. load < 50)
Width, sized (Section 1005.1): To be determined at tenant infill configurations

Accessibility — Chapter 11

Parking Spaces: *Table 1106.1*

Total Parking Spaces:	54
Required Accessible Spaces:	3 (provided)
Required Van Accessible Spaces:	1 (provided)

Water Closets & Lavatories:
Comply with ICC A117.1

Interior Environment — Chapter 12

1202 and 1203: Refer to Mechanical drawings for ventilation compliance.
1204: Refer to Electrical drawings for lighting compliance

Plumbing — Chapter 29

Required Water Closets:
Number of fixtures required per Table 29-A:
To be determined at tenant infill configurations

Energy Conservation — 2019 Oregon Zero Energy Ready Commercial Code

PORTAL BEAVERTON

CITY OF BEAVERTON GENERAL CONSTRUCTION NOTES

GENERAL:

1) All public improvements shall be constructed per the applicable sections of the standards in place at the time of permit application.

2) Existing utility locations are approximate only. In order to protect existing underground utilities, contractors performing work shown on these plans must notify utilities and public agencies at least 48 business hours in advance of, and no more than 10 business days before, beginning excavation, in accordance with the provisions of OAR 952-001-0090. Limits of work shall be pre-marked for the utility locators. Pothole all crossings as necessary to prevent grade and alignment conflicts. Report all conflicts to the engineer immediately. Protect existing utilities at all times during construction. Call the One Call Utility Notification Center at 503-246-6699 for utility locates. Any damage to existing utilities, whether they're shown on these drawings or not, will be repaired or replaced at the contractor's expense. ATTENTION: Oregon law requires all excavators to follow rules adopted by the Oregon Utility Notification Center. Those rules are set forth in OAR 952-001-1010 through OAR 952-001-0090. You may obtain copies of the rules by calling the center. (Note: The telephone number of the administration office for the Oregon Utility Notification Center is 503-232-1987).

3) The contractor shall exercise all due care in protecting property along the route of the improvements. This protection shall include, but not be limited to, trees, yards, fences, drainage lines, mail boxes, driveways, shrubs, lawns, irrigation systems, within any rights-of-ways and easements. If any of the above have been disturbed, they shall be restored as necessary to as near their original condition as possible or replaced in kind.

4) The contractor shall perform all the work shown on the drawings and all incidental work considered necessary to complete the project in an acceptable manner.

5) The contractor and/or each sub-contractor shall have a minimum of one set of City-approved construction plans on the job site at all times during each construction phase while work is being done.

6) All material supplies shall submit to the engineer proof of material(s) tested in accordance with specifications. By acceptance of the contract with the owner/developer, the contractor certifies that all materials delivered to the job site will meet or exceed those specifications. Any material not conforming shall be removed from the site at no additional cost to the owner.

7) Following substantial completion, the developer's engineer shall provide three paper-copy, as-built and record drawing sets of all sheets in this plan set plus any approved revisions. After walk through and punch-list preparation by City crews, the City inspector will request revisions to the as-builts and record drawings. The developer's engineer shall then provide one set of mylar as-builts and record drawings and an electronic copy in AutoCAD format (dxf or dwg files) on disk to the City Inspector, per City standards.

STORM SEWER:

1) All storm sewer construction and all materials shall conform to the applicable sections of the City of Beaverton 2019 Engineering Design Manual & 2019 R&O 19-5 CWS Design and Construction Standards.

2) All service laterals to be constructed at a minimum slope of one-quarter inch per linear foot unless otherwise shown on plans or approved by the City Building Division.

3) All existing storm systems shall be cleaned and flushed and original drainage restored. Sediment, rock and other debris shall be collected and disposed of in a proper manner. In no case shall debris be flushed down a storm or sanitary sewer for disposal. All damaged irrigation and house drainage pipe, drain tiles, sewer laterals and culverts shall be repaired expeditiously. Debris collected shall be disposed in a commercial landfill or other approved location.

4) Storm sewer pipe shall be of the size and type noted on the plans. Concrete reinforced pipe shall be bell & spigot pipe and shall conform to ASTM C76-CL III (unless otherwise shown). Catch basins and curb inlets shall be the type shown on the detail sheet.

5) Installation of the storm sewer shall be performed according to the standard practice. Pipe lines shall be laid on a straight alignment and uniform grade between structures. Pipe bedding shall be placed to form a continuous and uniform bearing support for the pipe at every point between joints; pipe zone material shall be placed up to the spring line of the pipe and material uniformly compacted by hand to insure proper support within the pipe haunches. All backfill in public right of way and other traffic areas shall be ¾"-0" compacted crushed rock, compacted to 95% percent of maximum density as obtained by AASHTO T-99 compaction test.

6) Storm sewer stubs and service laterals shall be marked with a 2"x4", minimum 8 foot posts (with at least 3 feet exposed above ground) painted white with thick, black pen or black lumber crayon indicating depth of pipe, lot # (if applicable), and stationing. PVC pipe used for storm service laterals shall be white in color.

7) Prior to acceptance, all public storm sewer shall be thoroughly cleaned and, as appropriate, mandrelled (by Developer) and TV-scanned (by City Operations) in accordance with the City of Beaverton's requirements for such tests.

SANITARY SEWERS:

1) All sanitary sewer construction and all materials shall conform to the applicable sections of the City of Beaverton 2019 Engineering Design Manual & 2019 R&O 19-5 CWS Design and Construction Standards.

2) All service laterals to be constructed at a minimum slope of one-quarter inch per linear foot unless otherwise shown on plans or approved by the City Building Division.

3) Water line construction shall comply with EDM section 630.3 and Oregon Department of Human Services (DHS, formerly Oregon Health Division – rules accessed at www.cin.h.state.or.us/dwp/rules.cfm) regarding the location and separation of water lines and sanitary sewer lines – (specifically, separation requirements can be accessed at http://oregon.gov/DHS/ph/dwp/docs/pwrules/61-0030.pdf)

8. Upon completion of installation of the water system, all lines shall be flushed and disinfected in conformance with EDM section 630.6, DHS guidelines and the requirements of the Oregon Department of Environmental Quality. Waterlines shall be pressure tested following completion. The minimum test pressure shall be 150 PSI. For lines working with operation pressures greater than 100 PSI, the minimum test pressure shall be one and one-half times the operation pressure. The duration of the test shall be 2 hour, unless otherwise directed by the City Inspector. Allowable leakage is in accordance to City Standards (0 psi).

9. All water service laterals are to be installed by the developer in accordance with the City Standards.

10. Fire hydrants shall be located to allow a minimum of 36" clear space surrounding all portions of the hydrant. There shall also be no obstructions directly in line with any of the ports of the hydrant for a distance of 5 feet.

11. All waterline taps 8" or greater shall use an all stainless steel tapping sleeve (JCM 432 or approved equal).

12. Cross Connection Control and Backflow Assemblies shall be as per City of Beaverton 2019 Engineering Design Manual, Section 610 and detail drawings 690-1 through 690-10. When required, backflow prevention assemblies for the protection of the public water system shall meet the requirements set forth in the current Oregon Administrative Rules Chapter 333-061-0070, Uniform Plumbing Code, and City of Beaverton Code 4.02.160 and 4.02.165. Contact the City Backflow Specialist for more information at 503-350-4042.

STREET LIGHTS:

1) Option "C" street lighting will be used as stated in Section 450 of the City of Beaverton 2019 Engineering Design Manual. An electrical permit from the City Building Division is required prior to any installation.

2) All electrical components shall be UL approved or approved-equal.

3) The contractor shall be responsible for making arrangements with PGE for connecting the street lighting system to the local distribution system.

4) Anchor base poles shall be used unless otherwise pre-approved (on a case by case basis) by the City Operations and Maintenance Director. Wood poles shall not be used.

5) A J-box shall be located within 3 feet of each light pole base (exception: a controller may serve as a J-box for a light pole base within ten feet proximity to a controller).

8. The contractor shall notify the City inspector at least 48 hours (two full working days) prior to beginning the project. Connections between existing infrastructure and new work shall not be made until necessary inspections and tests have been completed on the new work and it is found to conform in all respects to the requirements of the plans and specifications.

STREETS AND STRUCTURAL FILLS:

1) All trees, brush and debris within the limits of the right-of-way and on the areas to be filled shall be removed and disposed of by the contractor unless otherwise noted on the plans or flagged in the field.

2) All areas of construction shall be stripped. Stripping shall consist of removing the topsoil humus. Stripping materials shall be stockpiled or disposed by the contractor on site as approved by the inspector, or hauled off site to an approved location.

3. Embankments and structural fills for roadway construction or fills to be constructed on buildable areas shall be constructed from excavated materials acceptable to the soils engineer and shall be brought to grade in lifts not to exceed 12" to 18" loose measure. Each lift shall be compacted to 95 percent of maximum density as obtained by AASHTO T-99 compaction test. Combination test results shall be submitted to the City inspector.

4) Fills shall not be constructed on natural slopes steeper than 2 horizontal to 1 vertical. All fill slopes shall not exceed 2 horizontal to 1 vertical. No rock or similar irreducible material with a minimum dimension greater than 12 inches shall be buried or placed in the fills.

5) If springs or ground water are encountered during construction, the contractor shall advise the soils and civil engineers of the condition found and coordinate activities in a manner that will allow the engineer(s) time to review the situation and prepare a plan to properly dispose of the water encountered for City approval and per Clean Water Services requirements.

6) Rock base, asphaltic concrete pavement, concrete pavement curb and sidewalk construction shall be as shown on the typical sections and detail sheet and in accordance with the above referenced specifications.

7) The contractor shall clean all spilled dirt, gravel or other foreign material caused by the construction operations from all streets and roads at the conclusion of each day or operation. Cleaning shall be by grader and front-end loader, supplemented by power brushing and hand labor unless otherwise approved by the City. The contractor shall follow City and CWS erosion control procedures.

8. As soon as practical after completion of all paving and gravel shoulder resurfacing, the contractor shall remove all dirt, mud, rock gravel and other foreign material from the paved surface and storm drainage system.

3) Installation of the sanitary sewer shall be performed according to the standard practice. Pipe lines shall be laid on a straight alignment and uniform grade between structures. Pipe bedding shall be placed to form a continuous and uniform bearing support for the pipe at every point between joints; pipe zone material shall be placed up to the spring line of the pipe and material uniformly compacted by hand to insure proper support within the pipe haunches. All backfill in public right of way and other traffic areas shall be ¾"-0" compacted crushed rock compacted to 95% percent of maximum density as obtained by AASHTO T-99 compaction test.

4) Sanitary sewer stubs and service laterals shall be marked with 2"x4", minimum 8 foot posts (with at least 3 feet exposed above ground) painted green or red with thick, black pen or black lumber crayon indicating depth of pipe, lot # (if applicable), and stationing. PVC pipe used for sanitary service laterals shall be green in color.

5) Prior to acceptance, all public sanitary sewers shall be thoroughly cleaned and, as appropriate, mandrelled and air tested (both by Developer) and TV scanned (by City Operations) in accordance with the City of Beaverton's requirements for such tests.

WATER LINES (City Water Service Area ONLY):

1) Operation of existing valves shall be performed only by Public Works Water Operations staff as authorized by City DRC, per EDM section 610.4.4.

2) All materials and workmanship shall comply with AWWA, City of Beaverton, and the Uniform Plumbing Code as applicable. All material shall be of new manufacture. No rebuilt or used materials will be allowed.

3) All mainline ductile iron pipe shall have push-on, cement-lined interior coating with the exterior coated with zinc. The pipe shall be Class 52 with Tyton joints. The zinc coated pipe requires V-Bio Enhanced Polyethylene Encasement of not less than 8 mil thickness per EDM section 610.2.11. All fittings shall be mechanical joints conforming to ANSI A-21.11. All joints shall be mechanically restrained EB AA iron works or equal with USA or Canadian parts.

4) Fire hydrant assemblies shall conform to the City of Beaverton's accepted brands and models.

5) All pipes shall have 36" minimum cover measured from finish grade unless specifically noted for less cover with mitigating measures. All new piping to be mechanically restrained.

6) All backfill in the right of way or other traffic areas shall be ¾"-0" compacted crushed rock, compacted to 95 percent of maximum density as obtained by AASTO T-99 compaction test. Pipe bedding shall be placed to form a continuous and uniform bearing support for the pipe at every point between joints; pipe zone material shall be first placed up to the spring line of the pipe and material uniformly compacted by hand to insure proper support within the pipe haunches.

Conduit between light pole base and adjoining J-box shall be minimum 1 inch diameter size. Conduit between J-boxes and conduit to power source, controller, or other structures shall be minimum 2 inch diameter size. J-Boxes shall be Brooks #36 or equivalent at all light pole bases; other applications may require larger box sizes.

TRAFFIC CONTROL:

1) Traffic control to be performed in accordance with the Manual for Uniform Traffic Control Devices and Oregon amendments as required. The City can require additional traffic control measures as needed to provide for public safety.

2) On residential local streets, the contractor shall be responsible to provide all required traffic control when work is being done in the right of way.

3. All existing streets with a greater classification than a residential local street shall require a traffic control plan prepared by a professional engineer for both construction operations and after-hour situations.

4) All traffic control measures need to be submitted to the City of Beaverton for review prior to construction.

APPROVALS AND MODIFICATIONS:

1) Any revision to approved plans must be under the direction of the Engineer of Record (or Coordinating Design Professional). It shall be at the discretion of the City's Project Inspector as to whether the revision is significant enough to warrant review by the City Engineering Plan Review staff. If so, the Engineer shall submit five (5) copies of the proposed revision; no work affected by the revision shall be done until approved by the City Site Development Engineer. The City inspector and the Engineer of Record must approve all other changes prior to implementation of the change.

Notice: A building permit is required for the private underground fire service mains. The Private Fire Service Mains shall comply with the Oregon Fire Code and NFPA-24. Section 508.2.1 OFC.

Deferred Submittals

The following items shall be Deferred Submittals:

1. Fire Sprinklers (via separate permit)
2. Electrical System (via separate permit)
3. Mechanical Systems (via separate permit)
4. Exterior Cladding
5. Storefront Systems (product data and installation)
6. Roof and Floor Trusses
7. Steel Canopies/Awnings
8. Elevator (including two-way communication system)
9. Seismic Bracing of Piping and Equipment
10. Stairs and Handrails
11. Fire Alarm System (via separate permit)
12. Underground Exterior Fire Sprinkler Piping
13. Mechanical Screen Wall

All deferred submittal items shall be reviewed by the Architect and stamped and signed by the Architect stating that they are found to be in general conformance to the design of the building.

Special Inspections

A listing of Special Inspections required is itemized on Sheet S100, "Statement of Special Inspections"

ENVELOPE INSULATION LEVELS AND GLAZING SPECIFICS:

Roof:	R-30ci
Walls:	R-21 (wood framed)
Slab Floors (unheated):	R-15 for 24 in
Opaque Doors:	R-3 (min)
Fenestration:	U 0.36 (metal, fixed) | SHGC 0.25 (see specs)
	North is 33.4%
	South is 36.3%
	West is 32.2% (17.8% of total window area)
	East is 34.0% (18.8% of total window area)

SHEET INDEX

FINAL INSPECTION AND CERTIFICATE OF OCCUPANCY REQUIRED

ALL DEFERRED SUBMITTAL DOCUMENTS SHALL BEAR THE SHOP DRAWING STAMP AND SIGNATURE OF THE ENGINEER AND/OR ARCHITECT OF RECORD

SEPARATE APPLICATION, PLANS AND PERMIT REQUIRED FOR:

- [X] FIRE AND LIFE-SAFETY
- [X] FIRE ALARMS
- [X] FIRE SPRINKLER
- [ ] FIRE SUPPRESSION
- [ ] TYPE I OR TYPE II HOOD
- [ ] HIGH PILED STORAGE RACKS

THESE PLANS SHALL REMAIN ON THE JOB SITE DURING CONSTRUCTION. THESE PLANS SHALL NOT BE CHANGED, MODIFIED, OR ALTERED WITHOUT AUTHORIZATION FROM THE BUILDING OFFICIAL AND ALL WORK SHALL BE DONE IN ACCORDANCE WITH THESE PLANS. APPROVAL OF THESE PLANS SHALL NOT BE CONSTRUED TO BE A PERMIT FOR, OR APPROVAL OF ANY VIOLATION OF THE CODES OF THE CITY OF BEAVERTON. REQUIRED INSPECTIONS MUST BE MADE AND APPROVED DURING CONSTRUCTION.

ELECTRICAL	

STANDARD HOOK NOTES:
1. ALL HOOKED BARS SHALL EXTEND AS FAR AS POSSIBLE TO THE OPPOSITE FACE WITH A MINIMUM OF 2" END COVER AND EMBEDMENT NOT LESS THAN SCHEDULE
2. MINIMUM SIDE COVER = 2 1/2"
3. Ø = 6 db (FOR #3 THROUGH #8)
   Ø = 8 db (FOR #9, #10 AND #11)
   Ø = 10 db (FOR #14 AND #18)

STRAIGHT BARS AT A JOINT NOTES:
1. STRAIGHT BARS TERMINATED AT A JOINT SHALL PASS THROUGH THE CONFINED CORE OF A SEISMIC COLUMN OR SHEAR WALL BOUNDARY ELEMENT. ANY PORTION OF THE STRAIGHT EMBEDMENT NOT WITHIN THE CONFINED CORE SHALL BE INCREASED BY A FACTOR OF 1.6

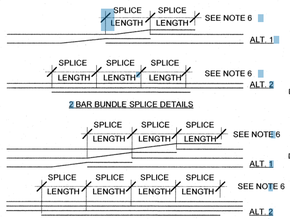
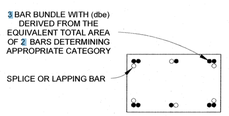
REINFORCING SPLICE NOTES
1. TOP BARS ARE HORIZONTAL BARS WITH MORE THAN 12" OF CONCRETE CAST BELOW THE BARS
2. BOTTOM BARS ARE ALL VERTICAL BARS AND HORIZONTAL BARS WITH LESS THAN 12" OF CONCRETE CAST BELOW HORIZONTAL BARS
3. FOR LIGHTWEIGHT CONCRETE MULTIPLY THE LENGTHS IN THE SCHEDULE BY 1.3
4. FOR GRADE 75 REINFORCING MULTIPLY THE LENGTHS IN THE SCHEDULE BY 1.25
5. FOR 2 BAR BUNDLE MULTIPLY THE LENGTHS IN THE SCHEDULE BY 1.20. FOR 3 BAR BUNDLE MULTIPLY THE LENGTHS IN THE SCHDULE BY 1.33
6. FOR BUNDLED BARS, AN EFFECTIVE BAR DIAMTER SHALL BE USED FOR DETERMINING COVER AND SPACING LIMITATIONS
   A. FOR 2 BAR BUNDLE dbe = 1.60 (√BAR AREA)
   B. FOR 3 BAR BUNDLE dbe = 1.95 (√BAR AREA)

1 Typ Straight and Hooked Embedment Length Schedule
3/4" = 1'-0"

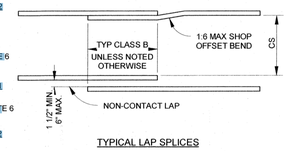


BUNDLED LAP SPLICES

NOTE: BARS SHALL BE BUNDLED WITH NO MORE THAN TWO BARS IN THE SAME PLANE (. . .)



BAR SPACING



TYPICAL LAP SPLICES

TYPICAL REINFORCING AT RE-ENTRANT CORNERS

JOINT REPLACEMENT GUIDELINES
A. LOCATE CONTROL JOINTS AND/OR CONSTRUCTION JOINTS AT
   1. COLUMN CENTERLINES
   2. RE-ENTRANT CORNERS OF BUILDING
   3. AT CORNERS OF INTERIOR MASONRY WALLS AND FOOTINGS
   4. AT OPENINGS IN MASONRY WALLS WITH FOOTINGS
B. SPACE JOINTS NO MORE THAN THE FOLLOWING: 10' o.c. EA. WAY
C. SUBDIVIDE SLAB AREAS TO LIMIT LENGTH TO WIDTH RATIO OF SLAB AREA TO 3 TO 1 MAXIMUM. PROVIDE SQUARE SLAB AREAS WHERE PRACTICAL
D. PROVIDE DIAMOND SHAPED JOINT PATTERN AROUND COLUMNS
E. PROVIDE (2) #4 BARS AT RE-ENTRANT CORNERS OF SLAB PER TYPICAL DETAIL

2 Typ. Slab on Grade Joint Layout
N.T.S.

Building Specifications

Division 0100 – General

101 Code - All work to comply with all local and state codes, including:
- 2019 Oregon Structural Specialty Code
- Codes Specified by Architect

102 Permits and Fees:
A. The owner will provide and pay for all permits and fees except where provided by contract.

103 Coordination:
A. The contractor is responsible for the coordination of all sub contractors and trades.

Division 0300 – Concrete

301 General Requirements:
A. Concrete design, components, storage, mixture, placement and reinforcement shall conform to chapter 19 of the building code.
B. Protect all concrete from damage and use special care on all exposed concrete to prevent staining or discoloration.
C. Concrete is to be ready mixed, air entrained ASTM C-94 & ASTM C-260. The minimum 28 day strength is to be 4000 psi. Special inspection as required. Do not air entrain interior slabs which are to be smooth, dense, and hardtroweled finished.

302 Formwork:
A. Forms shall be substantial, sufficiently tight, and properly braced to prevent leakage and maintain position and shape.
B. Forms and shoring shall not be removed until the structure has sufficient strength to support safely its weight and all loads placed thereon.

303 Reinforcement:
A. Grade 40 minimum for #3 bars and smaller. Grade 60 for all others unless noted otherwise. ASTM A615. Place per ACI code and standards. Lap continuous bars 30" minimum unless noted otherwise.

304 Cast-in-Place Concrete:
A. Exterior slabs and walkways are to have a light broom finish. Slope a minimum of ¼" per ft. away from structure for drainage.

Division 0500 – Metal

501 Bolts: ASTM A307, A325, or A490 as specified on the plans.
502 Welding: E70 (FEXX = 70 ksi)
503 Hot Rolled Steel: C, MC, L sections – ASTM A36; W sections – ASTM A992;
HSS sections – ASTM A500 GR. B; Steel Pipe – ASTM A53 GR. B
Plates, Bars - ASTM A36

506 Fasteners:
A. Nails: ASTM F1667; Use ASTM A153 if in contact with pressure treated wood or exposed to weather. 8d: .131"x2 ½"; 10d: .148"x3"; 16d: .162"x3½"
B. Wood Screws: Simpson Strong-Tie SD or SDS (or equivalent); Screws are to be in compliance with ASTM B695 Class 55 if in contact with pressure treated wood or exposed to weather.
C. Lag Bolts (or Lag Screws): ANSI/ASME Standard B18.2.1; hot dip galvanize if exposed to weather.

507 Anchors:
A. Prefabricated anchors are to be Simpson Strong-Tie or equal.
B. ½" or 5/8" anchors per ASTM A307; ¾" or larger per ASTM F1554
C. Threaded rods: ASTM A36
D. PAF's (Power Actuated Fasteners): ITW Ramset 1500 Series (ICC ESR-1799) or equal; .145" diameter minimum
E. Titen HD: Simpson Strong-Tie, Install per ICC-ES ESR-2713 (Concrete), ESR-1056 (CMU)
F. Nelson D2L Deformed Bars: Per ICC ER-2907
G. Nelson Headed/Threaded Studs per ICC ESR-2856

Statement of Special Inspections

Post Installed Anchors
- Titen HD (Periodic ICC ESR-2713)

Steel: Fabrication to be performed in approved shop (Unless noted otherwise on approved plans)
- Material verification of structural steel (Periodic)
- Material verification of weld filler materials (Periodic)
- Welding: Single pass fillet welds (Periodic)
- Reinforcing steel in walls (Periodic)
- High Strength Bolts (Periodic)
- Concrete Construction: Per OSSC 1705.3
- Soils per OSSC 1705.6
- Fabricated Items per OSSC 1705.10

Concrete Construction (Per OSSC 1705.3)
Soils (Per OSSC 1705.6)
Fabricated Items (Per OSSC 1705.10)

1

Division 0600 – Wood, Plastics, and Composites

601 General: Woods construction is to conform to chapter 23 of the code

602 Solid Sawn Lumber:
A. Evidence of grade: Grade mark of an approved grading organization having jurisdiction must appear on each piece of material.
B. Framing Lumber: DF-L, S4S, to standard dimensions
2x4Stud: Stud Grade (or better)
2x6 Stud: #2 (or better)
2x Framing: #2 (or better)
4x Framing: #2 (or better)
6x Framing: #1 (or better)
Furring or Blocking: #3 (or better)

603 Laminated Lumber:
A. Evidence of grade: Grade mark of an approved grading organization having jurisdiction must appear on each piece of material.
B. Beams: DF/DF, to specified dimensions
Supported at each end: 24F-V4
More than two supports, or cantilevered: 24F-V8
C. Columns: DF/DF, to specified dimensions: 24F-V4

604 Structural Composite Lumber:
A. LVL (Laminated Veneer Lumber) 1.9E – Trus Joist Microllam or equal
B. PSL (Parallel Strand Lumber) 2.0E – Trus Joist Parallam or equal
C. LSL (Laminated Sheet Lumber) 1.5E Structural – Trus Joist TimberStrand or equal
D. LSL (Laminated Sheet Lumber) 1.3E Non-Structural – Trus Joist TimberStrand or equal
E. I-Joists – Trus Joist TJI or equal

606 Sheathing:
A. Roof Sheathing: APA rated sheathing, exposure 1. Minimum panel span rating of 32/16 with a minimum thickness of 19/32". Grade mark by APA or other approved agency. Minimum attachment to supporting members: 8d nails, 6"o.c. at panel edges, 12"o.c. at interior of panel.
B. Floor Sheathing: APA rated sheathing. Minimum panel span rating 48/24 with a minimum thickness of ¾". Grade mark by APA or other approved agency. Minimum attachment to supporting members: 10d nails, 6"o.c. at panel edges, 12"o.c. at interior of panel.
C. Wall Sheathing: APA rated sheathing, exposure 1. Minimum panel span rating of 24/0 with a minimum thickness of 7/16". Grade mark of APA or other approved agency. Minimum attachment to supporting members: 8d nails, 6"o.c. at panel edges, 12"o.c. at interior of panel.

607 Pressure Treated Lumber:
A. Sill plates and foundation plates in contact with concrete - #3 Hem, PT to comply with AWPB LP-2 Stamp .25#/ft^3 specifications and conform to ICC standards.
B. All purpose construction lumber and timbers - #2 & BTR Hem, PT to comply with with AWPB LP-22 Stamp .40#/ft^3 specifications and conform to ICC standards.

Structural Criteria

GENERAL:
RISK CATEGORY: II
WIND:
ULTIMATE DESIGN SPEED = 97 MPH
EXPOSURE = B
INTERNAL PRESSURE COEFFICIENT = +/- 0.18
COMPONENT & CLADDING DESIGN WIND PRESSURE IN ASD
LOADING AND GREATER THAN 10 SQ. FT.
= 31 PSF (WALL SURFACE)
=24 PSF (ROOF SURFACE)
SEISMIC:
IMPORTANCE FACTOR = 1.0
SS = 0.895 SI = 0.413
SITE CLASS: D
SDS = 0.716 SDI = 0.523
Seismic Design Category: 'D'
INTERMEDIATE PRECAST CONCRETE SHEAR WALLS
TOTAL DESIGN BASE SHEAR = 172.8k (LRFD LOAD)
CS = 0.179 R = 4.0
EQUIVALENT LATERAL FORCE DESIGN
ROOF:
DEAD = 20 PSF
SNOW = 25 PSF
SECOND FLOOR LEVEL (OFFICE ONLY):
DEAD = 15 PSF
LIVE (OFFICE) = 50 PSF OR 80 PSF OR 2000#
PL* = 15 PSF
* = PL WITH 50 PSF LL ONLY
FIRST FLOOR LEVEL (CONC. SLAB ON GRADE):
DEAD = 20 PSF
LIVE = 125 PSF
SOIL BEARING CAPACITY:
-3800 PSF ISOLATED FOOTINGS
-2500 PSF STRIP FOOTINGS
* BASED ON BEARING PER GEOTECHNICAL REPORT BY K&A ENGINEERING DATED MARCH 2, 2020 AND SOIL AND FILL NOTES ON SHEET S101
STAIRS / EXIT:
LIVE = 100 PSF

ENERGY COMPLIANCE NOTES

1. SUPPLY AND RETURN AIR DUCTS AND PLENUMS SHALL BE INSULATED WITH A MINIMUM OF R-6 INSULATION WHEN LOCATED IN UNCONDITIONED SPACES AND A MINIMUM OF R-8 INSULATION WHEN LOCATED OUTSIDE THE BUILDING INSULATION ENVELOPE. OUTSIDE AIR, SUPPLY AIR, AND RETURN AIR DUCTWORK CONVEYING AIR LESS THAN 15 DEG. F. WARMER OR COOLER THAN THE SURROUNDING AIR NEED NOT BE INSULATED. (IECC C403.11.1, ASHRAE STD. 90.1 6.4.4.1.2).

2. WHERE USED TO CONTROL BOTH HEATING AND COOLING, ZONE THERMOSTATIC CONTROLS SHALL BE CONFIGURED TO PROVIDE A TEMPERATURE RANGE OR DEADBAND OF NOT LESS THAN 5 DEG. F. WITHIN WHICH THE SUPPLY OF HEATING AND COOLING ENERGY TO THE ZONE IS CAPABLE OF BEING SHUT-OFF OR REDUCED TO A MINIMUM. (IECC C403.4.1.2, ASHRAE STD. 90.1 6.4.3.1).

3. WHERE A ZONE HAS A SEPARATE HEATING AND SEPARATE COOLING THERMOSTATIC CONTROL LOCATED WITHIN THE ZONE, A LIMIT SWITCH, MECHANICAL STOP OR DIRECT DIGITAL CONTROL SYSTEM WITH SOFTWARE PROGRAMMING SHALL BE CONFIGURED TO PREVENT THE HEATING SETPOINT FROM EXCEEDING THE COOLING SETPOINT AND TO MAINTAIN A DEADBAND OF NOT LESS THAN 5 DEG. F. (IECC C403.4.1.3, ASHRAE STD. 90.1 6.4.3.2).

4. AUTOMATIC START CONTROLS SHALL BE PROVIDED FOR EACH HVAC SYSTEM. THE CONTROLS SHALL BE CONFIGURED TO AUTOMATICALLY ADJUST THE THE DAILY START TIME OF THE HVAC SYSTEM IN ORDER TO BRING EACH SPACE TO THE DESIRED OCCUPIED TEMPERATURE IMMEDIATELY PRIOR TO SCHEDULED OCCUPANCY. (IECC C403.4.2.3, ASHRAE STD. 6.4.3.3.3).

5. OFF HOURS CONTROLS: EACH ZONE SHALL BE PROVIDED WITH THERMOSTATIC SETBACK CONTROLS THAT ARE CONTROLLED BY EITHER AN AUTOMATIC TIME CLOCK OF PROGRAMMABLE CONTROL SYSTEM. (IECC C403.4.2, ASHRAE STD. 6.4.3.3).

6. SYSTEMS ADJUSTING AND BALANCING: HVAC SYSTEMS SHALL BE BALANCED IN ACCORDANCE WITH GENERALLY ACCEPTED ENGINEERING STANDARDS. AIR AND WATER FLOW RATES SHALL BE MEASURED AND ADJUSTED TO DELIVER FINAL FLOW RATES WITHIN THE TOLERANCES PROVIDED IN THE PRODUCT SPECIFICATIONS. TEST AND BALANCE ACTIVITIES SHALL INCLUDE AIR SYSTEM AND HYDRONIC SYSTEM BALANCING AS APPLICABLE. (IECC C408.2.2, ASHRAE STD. 6.7.2.3.1).

7. AIR SYSTEMS BALANCING: EACH SUPPLY AIR OUTLET AND ZONE TERMINAL DEVICE SHALL BE EQUIPPED WITH MEANS FOR AIR BALANCING IN ACCORDANCE WITH THE REQUIREMENTS OF CHAPTER 6 OF THE 2018 INTERNATIONAL MECHANICAL CODE (2019 OMSC). (IECC C408.2.2.1, ASHRAE STD. 90.1 6.7.2.3.2).

8. HYDRONIC SYSTEMS BALANCING: INDIVIDUAL HYDRONIC HEATING AND COOLING COILS SHALL BE EQUIPPED WITH MEANS FOR BALANCING AND MEASURING FLOW. HYDRONIC SYSTEMS SHALL BE PROPORTIONATELY BALANCED IN A MANNER TO FIRST MINIMIZE THROTTLING LOSSES, THEN THE PUMP IMPELLER SHALL BE TRIMMED OR PUMP SPEED SHALL BE ADJUSTED TO MEET DESIGN FLOW CONDITIONS. EACH HYDRONIC SYSTEM SHALL HAVE EITHER THE CAPACITY TO MEASURE PRESSURE ACROSS THE PUMP, OR TEST PORTS AT EACH SIDE OF EACH PUMP. (IECC C408.2.2.2, ASHRAE STD. 90.1 6.7.2.3.).

   EXCEPTIONS: THE FOLLOWING EQUIPMENT IS NOT REQUIRED TO BE EQUIPPED WITH A MEANS FOR BALANCING OR MEASURING FLOW:

   1. PUMPS WITH PUMP MOTORS OF 5 HP OR LESS.
   2. WHERE THROTTLING RESULTS IN NOT GREATER THAN 5 PERCENT OF THE NAMEPLATE HORSEPOWER DRAW ABOVE THAT REQUIRED IF THE IMPELLER WERE TRIMMED.

9. DOCUMENTATION REQUIREMENTS: THE CONSTRUCTION DOCUMENTS SHALL SPECIFY THAT THE DOCUMENTS DESCRIBED BELOW BE PROVIDED TO THE BUILDING OWNER OR OWNER'S AUTHORIZED AGENT WITHIN 90 DAYS OF THE DATE OF RECEIPT OF THE CERTIFICATE OF OCCUPANCY. (IECC C408.3.2, ASHRAE STD. 90.1 6.7.2).

   A. DRAWINGS: CONSTRUCTION DOCUMENTS SHALL INCLUDE THE LOCATION AND CATALOG (TAG) NUMBER OF EACH PIECE OF EQUIPMENT (IECC C4083.2.1, ASHRAE STD. 90.1 6.7.2.1).

   B. MANUALS: AN OPERATING AND MAINTENANCE MANUAL SHALL BE PROVIDED AND INCLUDE THE FOLLOWING (IECC C408.3.2.2, ASHRAE STD. 90.1 6.7.2.2):

      1. CAPACITY OF EQUIPMENT (INPUT AND OUTPUT) AND REQUIRED MAINTENANCE ACTIONS.
      2. HVAC SYSTEM CONTROL MAINTENANCE AND CALIBRATION INFORMATION, INCLUDING WIRING DIAGRAMS, SCHEMATICS, AND CONTROL SEQUENCE DESCRIPTIONS. DESIRED OR FIELD DETERMINED SETPOINTS SHALL BE PERMANENTLY RECORDED ON CONTROL DRAWINGS, AT CONTROL DEVICES, OR FOR DIGITAL CONTROL SYSTEMS, IN PROGRAMMING COMMENTS.
      3. NAME AND ADDRESS OF NOT LESS THAN ONE SERVICE AGENCY FOR INSTALLED EQUIPMENT.
      4. A COMPLETE WRITTEN NARRATIVE OF HOW EACH SYSTEM IS INTENDED TO OPERATE, INCLUDING RECOMMENDED SETPOINTS.
      5. EQUIPMENT CUT SHEETS AND PARTS LIST.
      6. WARRANTY INFORMATION.

   C. REPORT: A REPORT OF TEST RESULTS SHALL BE PROVIDED AND INCLUDE THE FOLLOWING (IECC C408.3.2.2):

      1. RESULTS OF FUNCTIONAL PERFORMANCE TESTS.
      2. DISPOSITION OF DEFICIENCIES FOUND DURING TESTING, INCLUDING DETAILS OF CORRECTIVE MEASURES USED OR PROPOSED.

GENERAL NOTES

1. ENTIRE INSTALLATION SHALL CONFORM TO THE REQUIREMENTS OF THE 2019 OSSC, 2019 OMSC, 2018 INTERNATIONAL ENERGY CONSERVATION CODE (IEEC), CITY & COUNTY CODES, AND OTHER APPLICABLE CODES AND REGULATIONS.
2. COORDINATE ENTIRE INSTALLATION OF THE H.V.A.C. SYSTEM WITH THE WORK OF OTHER TRADES PRIOR TO ANY FABRICATION OR INSTALLATION. PROVIDE FITTINGS, OFFSETS, AND TRANSITIONS AS REQUIRED FOR A COMPLETE WORKABLE INSTALLATION.
3. PLATFORMS, CURBS AND FLASHINGS FOR MECHANICAL EQUIPMENT SHALL BE AS INDICATED ON THE PLANS, UNLESS NOTED OTHERWISE.
4. EQUIPMENT SHALL BE INSTALLED IN STRICT ACCORDANCE WITH THE EQUIPMENT MANUFACTURER'S RECOMMENDATIONS. PROVIDE FITTINGS, TRANSITIONS, DAMPERS, VALVES, AND OTHER DEVICES REQUIRED FOR A COMPLETE WORKABLE INSTALLATION.
5. CONSTRUCT, ERECT AND TEST DUCTWORK IN ACCORDANCE WITH THE MOST RESTRICTIVE OF LOCAL REGULATIONS, 2019 OMSC, PROCEDURES DETAILED IN THE ASHRAE HANDBOOK OF FUNDAMENTALS OR THE APPLICABLE STANDARDS ADOPTED BY THE SHEET METAL AND AIR CONDITIONING CONTRACTORS NATIONAL ASSOCIATION. A COPY OF THE SMACNA STANDARDS SHALL BE KEPT AT THE JOB FOR REFERENCE BY THOSE REVIEWING THE WORK.
6. DUCT SIZES ARE NET INSIDE CLEAR DIMENSIONS (I.E. NOT INCLUDING LINER). DUCT JOINTS SHALL BE SEALED AIR TIGHT. PROVIDE STRAP, TRAPEZE, OR ROD HANGERS.
7. DUCT INSULATION AND LININGS, INCLUDING ADHESIVES WHEN USED, SHALL HAVE A FLAME SPREAD INDEX NOT MORE THAN 25 AND A SMOKE-DEVELOPED INDEX NOT MORE THAN 50 WHEN TESTED IN ACCORDANCE WITH ASTM E 84 OR UL 723..
8. DUCTWORK INSULATION SHALL HAVE THERMAL CONDUCTANCE OF 0.24 BTU PER SQ. IN./SQ. FT. PER DEG. F. PER HOUR AT A MEAN TEMPERATURE OF 75 DEG. F. AT 1-1/2 LB./CU. FT. DENSITY. LINER SHALL BE TREATED WITH A FIRE DAMAGE AND MILDEW RESISTANT SURFACE. FIBERGLASS DUCT WRAP BLANKET SHALL HAVE A THERMAL CONDUCTANCE OF 0.27 BTU PER IN./ SQ. FT. /DEG. F. PER HOUR AT A MEAN TEMPERATURE OF 75 DEG. F., AT 0.75 LB./CU. FT. DENSITY, WITH FSK FOIL REINFORCED FIRE-RESISTANT FACING AND A VAPOR BARRIER RATING OF 0.5 PERM.
9. SMOKE DETECTORS SHALL BE INSTALLED IN RETURN AIR SYSTEMS WITH A DESIGN CAPACITY GREATER THAN 2000 CFM IN THE RETURN AIR DUCT OR PLENUM UPSTREAM OF ANY FILTERS, EXHAUST AIR CONNECTIONS, OR DECONTAMINATION EQUIPMENT OR APPLIANCES PER OMSC SECTION 606.
10. LOCATIONS SHOWN ON PLANS FOR THERMOSTATS, SENSORS, AND SWITCHES CONTROLLING HVAC EQUIPMENT ARE SUGGESTED AND ARE TO BE VERIFIED AND COORDINATED WITH ARCHITECTURAL DRAWINGS AND ELECTRICAL DEVICE LAYOUTS.
11. FAN COIL UNITS FOR VRF HEAT PUMP TO BE DETERMINED AT TIME OF TENANT INFILL AND SUBMITTED UNDER SEPERATE PERMIT.

GENERAL NOTES

1. PLUMBING INSTALLATION SHALL COMPLY WITH CURRENT APPLICABLE STATE OF OREGON, COUNTY, AND CITY BUILDING CODES.
2. PLUMBING CONTRACTOR SHALL OBTAIN AND PAY FOR PLUMBING AND OTHER PERMITS ASSOCIATED WITH THE SCOPE OF WORK.
3. COORDINATE PLUMBING INSTALLATION WITH MECHANICAL, ELECTRICAL, AND FIRE PROTECTION CONTRACTORS PRIOR TO CONSTRUCTION. PLUMBING CONTRACTOR SHALL VISIT THE SITE PRIOR TO BIDDING.
4. EQUIPMENT AND FIXTURE LOCATIONS TO BE VERIFIED WITH OWNER PRIOR TO ANY WORK BEING DONE.
5. PLUMBING CONTRACTOR IS RESPONSIBLE FOR TESTING AND INSPECTIONS REQUIRED. ANY INSTALLATION DEFICIENCIES ARE TO BE CORRECTED PRIOR TO COVER.
6. PROVIDE FIRE STOPPING FOR PENETRATIONS THROUGH RATED CONSTRUCTION PER OPSC CHAPTER 14 AND OSSC SECTION 714. PROVIDE SUBMITTAL OF FIRE STOPPING MATERIALS AND METHODS AS REQUIRED.
7. COORDINATE PLUMBING INSTALLATION WITH SITE UTILITIES INDICATED ON THE SITE PLAN AND CIVIL DRAWINGS. COORDINATE WITH GENERAL CONTRACTOR FOR REQUIRED CONNECTION POINTS AND PIPING MATERIALS TO BE CONNECTED TO SITE UTILITIES – REFER TO CIVIL AND IRRIGATION DRAWINGS.
8. VERIFY WITH ARCHITECT THE TYPE OF MATERIAL FOR VERTICAL WASTE RISERS FOR SOUND ATTENUATION.
9. PROVIDE OFFSETS AND ASSOCIATED FITTINGS NOT INDICATED ON DRAWINGS AS REQUIRED.
10. PROVIDE CLEAN-OUTS AS REQUIRED PER OPSC SECTION 707.0.
11. PROVIDE WATER HAMMER ARRESTERS ON WATER SUPPLY SYSTEMS AT QUICK-ACTING VALVES AND AT END OF PIPING RUNS PER OPSC 609.10.
12. INSULATE CONDENSATE DRAINS FOR HVAC EQUIPMENT LOCATED INSIDE BUILDING ENVELOPE. DRAIN TO NEAREST APPROVED RECEPTOR OR WHERE INDICATED ON DRAWINGS.
13. INSULATE HOT WATER AND HOT WATER RE-CIRCULATING PIPING IN ACCORDANCE WITH OEESC 504.5.
14. SLOPE HORIZONTAL WASTE PIPING AT 2% MINIMUM.
15. USE OF PEX PIPING LIMITED TO RUN-OUTS AND DROPS TO FIXTURES.
16. HOT AND COLD WATER RUN-OUTS AND DROPS TO FIXTURES 1/2" UNLESS OTHERWISE NOTED ON DRAWINGS.
17. VERIFY HEIGHT OF EXTERIOR HOSE BIBS (WALL HYDRANTS) WITH ARCHITECT.
18. SEISMICALLY BRACE WASTE, VENT, WATER, AND GAS PIPING PER SMACNA STANDARDS, CURRENT EDITION, AS APPLICABLE.
19. VERIFY WITH CITY PLAN REVIEW AND PLUMBING INSPECTORS THE TYPE OF DOMESTIC WATER BACK FLOW PROTECTION REQUIRED FOR SITE WATER SERVICE. THIS INFORMATION IS TO BE PROVIDED TO THE GENERAL CONTRACTOR FOR ISSUE TO SITE UTILITY CONTRACTOR.

GENERAL PIPING MATERIALS NOTES

DOMESTIC WATER:
ASTM B88 TYPE L ABOVE GRADE, TYPE K BELOW GRADE W/ WROUGHT COPPER SOLDER TYPE FITTINGS (150 PSI SERVICE). TIN / ANTIMONY SOLDER (ASTM B32-95TA)

PEX PLASTIC TUBING AND JOINTS ALLOWED FOR FINAL CONNECTIONS TO FIXTURES

MATERIALS AND FITTINGS SHALL COMPLY WITH OPSC SECTION 604.0 AND TABLE 604.1.

DRAIN, SANITARY SEWER, & VENT
SCHEDULE 40 ABS (ASTM D3965 & F628 CELLULAR CORE) ASTM D3965 & D2661 DWV FITTINGS & ASTM D2235 SOLVENT CEMENT (UNLESS NOTED OTHERWISE)

MATERIALS AND FITTINGS SHALL COMPLY WITH OPSC SECTION 701.0 AND TABLE 701.2.

ENERGY COMPLIANCE NOTES

1. PROVIDE TEMPERATURE CONTROLS ON SERVICE WATER HEATING SYSTEMS TO LIMIT MAXIMUM HOT WATER TEMPERATURE TO <= 120 DEG. F. (ASHRAE STD. 90.1 7.4.4.1).
2. PROVIDE AUTOMATIC TIME SWITCH(ES) TO AUTOMATICALLY SWITCH OFF RECIRCULATING HOT WATER SYSTEMS OR HEAT TRACE TAPE (ASHRAE STD. 90.1 7.4.4.2).
3. PROVIDE HEAT TRAPS ON NON-CIRCULATING STORAGE WATER TANKS (ASHRAE STD. 90.1 7.4.6).
4. PROVIDE TEMPERATURE CONTROLLING MEANS TO LIMIT THE MAXIMUM TEMPERATURE OF WATER DELIVERED FROM LAVATORY FAUCETS IN PUBLIC FACILITY RESTROOMS TO 110 DEG. F. (ASHRAE STD. 90.1 7.4.4.3).
5. INSULATE HOT WATER IN ACCORDANCE WITH ASHRAE STD. 90.1 7.4.3 & TABLE 6.8.3-1.
6. INSULATE HEAT TRACED OR EXTERNALLY HEATED PIPING IN ACCORDANCE WITH ASHRAE STD. 90.1 7.4.3. & TABLE 6.8.3-1.

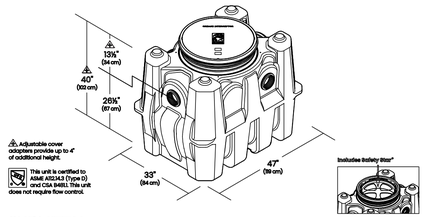
SPECIFICATION AND SUBMITTAL

GB-75 75 GPM Great Basin™ Indoor/Outdoor Grease Interceptor



SUBMITTAL

Standard

Location: Indoor/outdoor
Installation: Above/below grade
Flow Rate / Pressure Drop: 75 GPM (4.7 L/s) / 889 lbs. (396 kg), 118 gal. (447 L)
Removal Efficiency at the Rated Capacity: 95.8%
Solids Capacity: 31 gal. (117 L)
Liquid Capacity: 125 gal. (473 L)
Weight: 180 lbs. (86 kg)
Connections: 4" FPT with 4" plain end adapters, single inlet and triple outlet
Camera: Cast iron cover, pickable 24" gas/water tight, H-20 rated, proof-load tested to 40,000 lbs.
Access Restriction: Safety Step™ (450 lb. rating) built into cover adapter

Options

- ☐ 6" plain end inlet/outlet (straight-through) with dual pumpout port connections
- ☐ 6" MPT inlet/outlet. (stainless steel, straight-through)
- ☐ –HO (fixed outlet)
- ☒ GS48S Composite covers, bolted 24" gas/water tight, traffic load rated for 10,000 lbs.

Accessories

- ☐ FOR3 14" – 24" field cut riser
- ☐ FOR3 (48) 1-3/4" – 6-4" field cut risers
- ☐ FOR3 (48) 1-6-4" – 9-4" field cut risers
- ☐ CA3 Adapter for 24" corrugated pipe riser
- ☐ PP8 Pumpout port
- ☐ AR3 High water anchor kit
- ☐ AT3S Cover adapter tie-down kit
- ☐ PLAM-9A-S4 2" plain end fitting
- ☐ PLAM-6A-S4 3" plain and fitting
- ☐ FPT-9A-S4 4" x 2" FPT fitting
- ☐ FPT-9A-S3 3" x 2" FPT fitting
- ☐ FOR3 Integral membrane clamping collar kit

SCHIER	MODEL NUMBER: GB-75	DESCRIPTION: 75 GPM Polyethylene Grease Interceptor
PART #: 4046-007-01	DWG BY: S. Kizner	DATE: 8/28/2020 REV: ECO:

9900 Woodend Road | Edwardsville, KS 66111 | 913-441-3300 | schierproducts.com © Copyright 2020 Schier Products Company

SPECIAL PRECAUTIONS

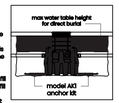
For Schier Grease Interceptor Installations – Failure to follow this guidance voids your warranty

Secure Cover Adapters

Cover adapters must be secured to base units in above grade installations with increased head pressure conditions. Use cover adapter tie-down kit model AT3S.

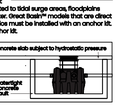
High Water Table Installations

Interceptors and risers are not designed to withstand water table height in excess of the top of the unit when buried (see figure). If it is possible for this to occur, install the interceptor and risers in a water-tight concrete vault or backfill with concrete or flowable fill (wet concrete and flowable backfill should be poured in stages to avoid crushing the interceptor). At risk areas include but are not limited to tidal surge areas, floodplains and areas that receive storm water. Great Basin™ models that are direct buried in high water table scenarios must be installed with an anchor kit. Model GB-75 uses model AR3 anchor kit.

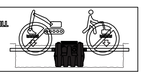


Hydrostatic Pressure Risks

When installed under a hydrostatic slab (slab designed to withstand upward lift, usually caused by hydrostatic pressure) interceptor must be enclosed in a watertight concrete vault.

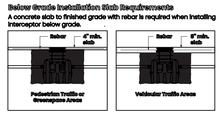


DO NOT COMPACT BACKFILL MECHANICALLY
Compact by hand only

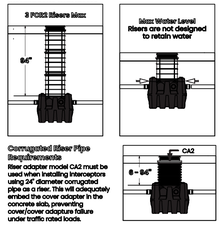


Below Grade Installation Slab Requirements

A concrete slab to finished grade with rebar is required when installing interceptor below grade.



Installations with Risers



Corrugated Riser Pipe Requirements

Riser adapter model CA2 must be used when installing interceptors using 24" diameter corrugated pipe as a riser. This will adequately embed the cover adapter in the concrete slab, preventing cover/cover adapters failure under traffic rated loads.

SCHIER	MODEL NUMBER: GB-75	DESCRIPTION: 75 GPM Polyethylene Grease Interceptor
PART #: 4046-007-01	DWG BY: S. Kizner	DATE: 8/28/2020 REV: ECO:

SPECIFICATIONS

NOTES

1. 4" FPT with 4" plain end adapters, single inlet and triple outlet
2. Unit weight – w/cast iron cover: 180 lbs.; w/composite cover: 135 lbs. (for wet weight calculations)
3. Maximum operating temperature: 150°F continuous
4. Capacities – Liquid: 125 gal.; Grease: 60 lbs. Solids: 31 gal.
5. This unit does not require flow control.
6. For gravity drainage applications only.
7. Do not use for pressure applications.
8. Cover placement allows full access to tank for ease of maintenance.
9. Inlet and outlet unions per local code.
10. Engineered inlet and outlet diffusers are removable to inspect / clean piping.
11. Integral air relief / Anti-siphon / sampling access.
12. Adjustable cover adapters provide up to 4" of additional height.
13. Fixed outlet models (–FO) have inlet and outlet permanently welded at the factory in the straight-through (B) position.
14. Maximum of 3 risers per unit at one drain time.
15. Safety Step™ access restrictor built into cover adapter, prevents accidental entry to tanks (450 lb rating)

DIFFUSION FLOW TECHNOLOGY

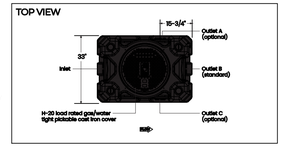
The inlet diffuser reduces turbulence, creates laminar flow and allows the entire tank volume to be utilized for efficient grease separation and minimal re-suspension of captured grease in subsequent layers. The integral air relief / anti-siphon at the outlet diffuser top allows pressure stabilization within the unit during operation. The outlet diffuser can easily be attached to any of the three outlets provided to ease job site piping layouts.

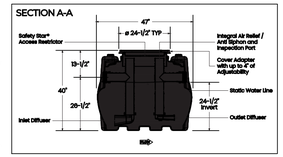
ENGINEER SPECIFICATION GUIDE

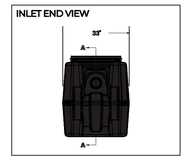
Schier Great Basin™ grease interceptor model # GB-75 shall be fiberglass reinforced and made in accordance with ASME A112.14.3 and CSA B481 series. Interceptor shall be furnished for above and below grade installation. Interceptor shall be certified to ASME A112.14.3 (Type G) and CSA B481 with adjustable cover adapter, Safety Step™ access restrictor built into cover adapter, and three outlet options. Interceptor flow rate shall be 75 GPM. Interceptor grease capacity shall be 881 lbs. Cover shall provide water/gas-tight seal and have minimum 10,000 lbs. load capacity.

CERTIFIED PERFORMANCE

Great Basin™ hydromechanical grease interceptors are third party performance-tested and listed by IAPMO to ASME A112.14.3 and CSA B481 grease interceptor standards and gravity exceed requirements for grease separation and storage. They are compliant to the Uniform Plumbing Code and the International Plumbing Code.







Rated Grease Capacities for Units Piped in Series

No. of Units In Series	Removal Efficiency
1	75 GPM 95.8%
2	1,722 lbs.
3	2,583 lbs.
4	3,444 lbs.

ENERGY COMPLIANCE NOTES

1. PROVIDE TEMPERATURE CONTROLS ON SERVICE WATER HEATING SYSTEMS TO LIMIT MAXIMUM HOT WATER TEMPERATURE TO <= 120 DEG. F. (ASHRAE STD. 90.1 7.4.4.1).
2. PROVIDE AUTOMATIC TIME SWITCH(ES) TO AUTOMATICALLY SWITCH OFF RECIRCULATING HOT WATER SYSTEMS OR HEAT TRACE TAPE (ASHRAE STD. 90.1 7.4.4.2).
3. PROVIDE CONTROLS THAT LIMIT THE OPERATION OF A RECIRCULATION PUMP INSTALLED TO MAINTAIN TEMPERATURE OF A STORAGE TANK. (ASHRAE STD. 90.1 7.4.4.4).
4. PROVIDE TEMPERATURE CONTROLLING MEANS TO LIMIT THE MAXIMUM TEMPERATURE OF WATER DELIVERED FROM LAVATORY FAUCETS IN PUBLIC FACILITY RESTROOMS TO 110 DEG. F. (ASHRAE STD. 90.1 7.4.4.3).
5. INSULATE HOT WATER IN ACCORDANCE WITH ASHRAE STD. 90.1 7.4.3 & TABLE 6.8.3–1.
6. INSULATE HEAT TRACED OR EXTERNALLY HEATED PIPING IN ACCORDANCE WITH ASHRAE STD. 90.1 7.4.3. & TABLE 6.8.3–1.

GENERAL NOTES

1. PLUMBING INSTALLATION SHALL COMPLY WITH CURRENT APPLICABLE STATE OF OREGON, COUNTY, AND CITY BUILDING CODES.
2. PLUMBING CONTRACTOR SHALL OBTAIN AND PAY FOR PLUMBING AND OTHER PERMITS ASSOCIATED WITH THE SCOPE OF WORK.
3. COORDINATE PLUMBING INSTALLATION WITH MECHANICAL, ELECTRICAL, AND FIRE PROTECTION CONTRACTORS PRIOR TO CONSTRUCTION. PLUMBING CONTRACTOR SHALL VISIT THE SITE PRIOR TO BIDDING.
4. EQUIPMENT AND FIXTURE LOCATIONS TO BE VERIFIED WITH OWNER PRIOR TO ANY WORK BEING DONE.
5. PLUMBING CONTRACTOR IS RESPONSIBLE FOR TESTING AND INSPECTIONS REQUIRED. ANY INSTALLATION DEFICIENCIES ARE TO BE CORRECTED PRIOR TO COVER.
6. PROVIDE FIRE STOPPING FOR PENETRATIONS THROUGH RATED CONSTRUCTION PER OPSC CHAPTER 14 AND OSSC SECTION 714. PROVIDE SUBMITTAL OF FIRE STOPPING MATERIALS AND METHODS AS REQUIRED.
7. COORDINATE PLUMBING INSTALLATION WITH SITE UTILITIES INDICATED ON THE SITE PLAN AND CIVIL DRAWINGS. COORDINATE WITH GENERAL CONTRACTOR FOR REQUIRED CONNECTION POINTS AND PIPING MATERIALS TO BE CONNECTED TO SITE UTILITIES – REFER TO CIVIL AND IRRIGATION DRAWINGS.
8. VERIFY WITH ARCHITECT THE TYPE OF MATERIAL FOR VERTICAL WASTE RISERS FOR SOUND ATTENUATION.
9. PROVIDE OFFSETS AND ASSOCIATED FITTINGS NOT INDICATED ON DRAWINGS AS REQUIRED.
10. PROVIDE CLEAN–OUTS AS REQUIRED PER OPSC SECTION 707.0.
11. PROVIDE WATER HAMMER ARRESTERS ON WATER SUPPLY SYSTEMS AT QUICK–ACTING VALVES AND AT END OF PIPING RUNS PER OPSC 609.10.
12. INSULATE CONDENSATE DRAINS FOR HVAC EQUIPMENT LOCATED INSIDE BUILDING ENVELOPE. DRAIN TO NEAREST APPROVED RECEPTOR OR WHERE INDICATED ON DRAWINGS.
13. INSULATE HOT WATER AND HOT WATER RE–CIRCULATING PIPING IN ACCORDANCE WITH OEESC 504.5.
14. SLOPE HORIZONTAL WASTE PIPING AT 2% MINIMUM.
15. USE OF PEX PIPING LIMITED TO RUN–OUTS AND DROPS TO FIXTURES.
16. HOT AND COLD WATER RUN–OUTS AND DROPS TO FIXTURES 1/2" UNLESS OTHERWISE NOTED ON DRAWINGS.
17. VERIFY HEIGHT OF EXTERIOR HOSE BIBS (WALL HYDRANTS) WITH ARCHITECT.
18. SEISMICALLY BRACE WASTE, VENT, WATER, AND GAS PIPING PER SMACNA STANDARDS, CURRENT EDITION, AS APPLICABLE.
19. VERIFY WITH CITY PLAN REVIEW AND PLUMBING INSPECTORS THE TYPE OF DOMESTIC WATER BACK FLOW PROTECTION REQUIRED FOR SITE WATER SERVICE. THIS INFORMATION IS TO BE PROVIDED TO THE GENERAL CONTRACTOR FOR ISSUE TO SITE UTILITY CONTRACTOR.

GENERAL PIPING MATERIALS NOTES

DOMESTIC WATER:	ASTM B88 TYPE L ABOVE GRADE, TYPE K BELOW GRADE W/ WROUGHT COPPER SOLDER TYPE FITTINGS (150 PSI SERVICE), TIN / ANTIMONY SOLDER (ASTM B32–95TA) PEX PLASTIC TUBING AND JOINTS ALLOWED FOR FINAL CONNECTIONS TO FIXTURES MATERIALS AND FITTINGS SHALL COMPLY WITH OPSC SECTION 604.0 AND TABLE 604.1.
DRAIN, SANITARY SEWER, & VENT	SCHEDULE 40 ABS (ASTM D3965 & F628 CELLULAR CORE) ASTM D3965 & D2661 DWV FITTINGS & ASTM D2235 SOLVENT CEMENT (UNLESS NOTED OTHERWISE) MATERIALS AND FITTINGS SHALL COMPLY WITH OPSC SECTION 701.0 AND TABLE 701.2.
